API REFERENCE

This page contains auto-generated API reference documentation¹.

1.1 argo

argo namespaced package

1.1.1 Subpackages

1.1.1.1 argo.models

Argo

No description provided (generated by Openapi Generator <https://github.com/openapitools/openapi-generator>) # noqa: E501

The version of the OpenAPI document: v2.4.3 Generated by: <https://openapi-generator.tech>

1.1.1.1.1 Submodules

1.1.1.1.1.1 argo.models.cronv1alpha1_create_cron_workflow_request

Argo

Workflow Service API performs CRUD actions against application resources # noqa: E501

The version of the OpenAPI document: v2.7.0-rc1 Generated by: <https://openapi-generator.tech>

1.1.1.1.1.2 Module Contents

class argo.models.cronv1alpha1_create_cron_workflow_request.Cronv1alpha1CreateCronWorkflow

Bases: object

¹ Created with [sphinx-autoapi](#)

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>

Cronv1alpha1CreateCronWorkflowRequest - a model defined in OpenAPI

openapi_types

attribute_map

property create_options (self)

Gets the create_options of this Cronv1alpha1CreateCronWorkflowRequest. # noqa: E501

Returns The create_options of this Cronv1alpha1CreateCronWorkflowRequest. # noqa: E501

Return type kubernetes.client.models.V1CreateOptions

property cron_workflow (self)

Gets the cron_workflow of this Cronv1alpha1CreateCronWorkflowRequest. # noqa: E501

Returns The cron_workflow of this Cronv1alpha1CreateCronWorkflowRequest. # noqa: E501

Return type [V1alpha1CronWorkflow](#)

property namespace (self)

Gets the namespace of this Cronv1alpha1CreateCronWorkflowRequest. # noqa: E501

Returns The namespace of this Cronv1alpha1CreateCronWorkflowRequest. # noqa: E501

Return type str

to_dict (self)

Returns the model properties as a dict

to_str (self)

Returns the string representation of the model

1.1.1.1.3 argo.models.cronv1alpha1_lint_cron_workflow_request

Argo

Workflow Service API performs CRUD actions against application resources # noqa: E501

The version of the OpenAPI document: v2.7.0-rc1 Generated by: <https://openapi-generator.tech>

1.1.1.1.4 Module Contents

class argo.models.cronv1alpha1_lint_cron_workflow_request.[Cronv1alpha1LintCronWorkflowRequest](#)

Bases: object

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>

Do not edit the class manually.

Cronv1alpha1LintCronWorkflowRequest - a model defined in OpenAPI

openapi_types

attribute_map

```
property cron_workflow(self)
    Gets the cron_workflow of this Cronv1alpha1LintCronWorkflowRequest. # noqa: E501

    Returns The cron_workflow of this Cronv1alpha1LintCronWorkflowRequest. # noqa: E501

    Return type V1alpha1CronWorkflow

property namespace(self)
    Gets the namespace of this Cronv1alpha1LintCronWorkflowRequest. # noqa: E501

    Returns The namespace of this Cronv1alpha1LintCronWorkflowRequest. # noqa: E501

    Return type str

to_dict(self)
    Returns the model properties as a dict

to_str(self)
    Returns the string representation of the model
```

1.1.1.1.5 argo.models.cronv1alpha1_update_cron_workflow_request

Argo

Workflow Service API performs CRUD actions against application resources # noqa: E501

The version of the OpenAPI document: v2.7.0-rc1 Generated by: <https://openapi-generator.tech>

1.1.1.1.6 Module Contents

```
class argo.models.cronv1alpha1_update_cron_workflow_request.Cronv1alpha1UpdateCronWorkflow
```

Bases: object

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>

Do not edit the class manually.

Cronv1alpha1UpdateCronWorkflowRequest - a model defined in OpenAPI

openapi_types

attribute_map

property cron_workflow(self)

Gets the cron_workflow of this Cronv1alpha1UpdateCronWorkflowRequest. # noqa: E501

Returns The cron_workflow of this Cronv1alpha1UpdateCronWorkflowRequest. # noqa: E501

Return type *V1alpha1CronWorkflow*

property name(self)

Gets the name of this Cronv1alpha1UpdateCronWorkflowRequest. # noqa: E501

Returns The name of this Cronv1alpha1UpdateCronWorkflowRequest. # noqa: E501

Return type str

```
property namespace (self)
    Gets the namespace of this Cronv1alpha1UpdateCronWorkflowRequest. # noqa: E501

    Returns The namespace of this Cronv1alpha1UpdateCronWorkflowRequest. # noqa: E501

    Return type str

to_dict (self)
    Returns the model properties as a dict

to_str (self)
    Returns the string representation of the model
```

1.1.1.1.7 argo.models.google.protobuf_any

Argo

Workflow Service API performs CRUD actions against application resources # noqa: E501

The version of the OpenAPI document: v2.7.0-rc1 Generated by: <https://openapi-generator.tech>

1.1.1.1.8 Module Contents

```
class argo.models.google.protobuf_any.GoogleProtobufAny(type_url=None,
                                                       value=None,
                                                       local_vars_configuration=None)
Bases: object

NOTE: This class is auto generated by OpenAPI Generator. Ref: https://openapi-generator.tech

GoogleProtobufAny - a model defined in OpenAPI

openapi_types
attribute_map

property type_url (self)
    Gets the type_url of this GoogleProtobufAny. # noqa: E501

    Returns The type_url of this GoogleProtobufAny. # noqa: E501

    Return type str

property value (self)
    Gets the value of this GoogleProtobufAny. # noqa: E501

    Returns The value of this GoogleProtobufAny. # noqa: E501

    Return type str

to_dict (self)
    Returns the model properties as a dict

to_str (self)
    Returns the string representation of the model
```

1.1.1.1.9 argo.models.grpc_gateway_runtime_stream_error

Argo

Workflow Service API performs CRUD actions against application resources # noqa: E501

The version of the OpenAPI document: v2.7.0-rc1 Generated by: <https://openapi-generator.tech>

1.1.1.1.10 Module Contents

```
class argo.models.grpc_gateway_runtime_stream_error.GrpcGatewayRuntimeStreamError (details=None,  

grpc_code=None,  

http_code=None,  

http_status=None,  

message=None,  

local_vars=None)
```

Bases: object

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>
Do not edit the class manually.

GrpcGatewayRuntimeStreamError - a model defined in OpenAPI

openapi_types

attribute_map

property details (self)
Gets the details of this GrpcGatewayRuntimeStreamError. # noqa: E501
Returns The details of this GrpcGatewayRuntimeStreamError. # noqa: E501
Return type list[*GoogleProtobufAny*]

property grpc_code (self)
Gets the grpc_code of this GrpcGatewayRuntimeStreamError. # noqa: E501
Returns The grpc_code of this GrpcGatewayRuntimeStreamError. # noqa: E501
Return type int

property http_code (self)
Gets the http_code of this GrpcGatewayRuntimeStreamError. # noqa: E501
Returns The http_code of this GrpcGatewayRuntimeStreamError. # noqa: E501
Return type int

property http_status (self)
Gets the http_status of this GrpcGatewayRuntimeStreamError. # noqa: E501
Returns The http_status of this GrpcGatewayRuntimeStreamError. # noqa: E501
Return type str

property message (self)
Gets the message of this GrpcGatewayRuntimeStreamError. # noqa: E501
Returns The message of this GrpcGatewayRuntimeStreamError. # noqa: E501
Return type str

to_dict (self)
Returns the model properties as a dict

to_str (self)
Returns the string representation of the model

1.1.1.1.11 argo.models.k8s_io_api_policy_v1beta1_pod_disruption_budget_spec

Argo

Workflow Service API performs CRUD actions against application resources # noqa: E501

The version of the OpenAPI document: v2.7.0-rc1 Generated by: <https://openapi-generator.tech>

1.1.1.1.12 Module Contents

class argo.models.k8s_io_api_policy_v1beta1_pod_disruption_budget_spec.**K8sIoApiPolicyV1beta1PodDisruptionBudgetSpec**

Bases: `object`

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>

Do not edit the class manually.

K8sIoApiPolicyV1beta1PodDisruptionBudgetSpec - a model defined in OpenAPI

openapi_types

attribute_map

property max_unavailable (self)

Gets the max_unavailable of this K8sIoApiPolicyV1beta1PodDisruptionBudgetSpec. # noqa: E501

Returns The max_unavailable of this K8sIoApiPolicyV1beta1PodDisruptionBudgetSpec. # noqa: E501

Return type kubernetes.client.models.V1IntOrString

property min_available (self)

Gets the min_available of this K8sIoApiPolicyV1beta1PodDisruptionBudgetSpec. # noqa: E501

Returns The min_available of this K8sIoApiPolicyV1beta1PodDisruptionBudgetSpec. # noqa: E501

Return type kubernetes.client.models.V1IntOrString

property selector (self)

Gets the selector of this K8sIoApiPolicyV1beta1PodDisruptionBudgetSpec. # noqa: E501

Returns The selector of this K8sIoApiPolicyV1beta1PodDisruptionBudgetSpec. # noqa: E501

Return type kubernetes.client.models.V1LabelSelector

to_dict (self)

Returns the model properties as a dict

to_str(*self*)

Returns the string representation of the model

1.1.1.1.13 argo.models.v1alpha1_archive_strategy

Argo

No description provided (generated by Openapi Generator <https://github.com/openapitools/openapi-generator>) # noqa: E501

The version of the OpenAPI document: v2.4.3 Generated by: <https://openapi-generator.tech>

1.1.1.1.14 Module Contents

```
class argo.models.v1alpha1_archive_strategy.V1alpha1ArchiveStrategy(_none=None,
                                                                    tar=None,
                                                                    lo-
                                                                    cal_vars_configuration=None)
```

Bases: object

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>

V1alpha1ArchiveStrategy - a model defined in OpenAPI

openapi_types**attribute_map****property tar**(*self*)

Gets the tar of this V1alpha1ArchiveStrategy. # noqa: E501

TarStrategy will tar and gzip the file or directory when saving # noqa: E501

Returns The tar of this V1alpha1ArchiveStrategy. # noqa: E501

Return type object

to_dict(*self*)

Returns the model properties as a dict

to_str(*self*)

Returns the string representation of the model

1.1.1.1.15 argo.models.v1alpha1_arguments

Argo

No description provided (generated by Openapi Generator <https://github.com/openapitools/openapi-generator>) # noqa: E501

The version of the OpenAPI document: v2.4.3 Generated by: <https://openapi-generator.tech>

1.1.1.1.16 Module Contents

```
class argo.models.v1alpha1_arguments.V1alpha1Arguments(artifacts=None,          pa-
                                                       parameters=None,          lo-
                                                       cal_vars_configuration=None)

V1alpha1Artifact - a model defined in OpenAPI

openapi_types

attribute_map

property archive(*self*)

Gets the archive of this V1alpha1Artifact. # noqa: E501

Returns The archive of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1ArchiveStrategy](#)

property archive_logs(*self*)

Gets the archive_logs of this V1alpha1Artifact. # noqa: E501

ArchiveLogs indicates if the container logs should be archived # noqa: E501

Returns The archive_logs of this V1alpha1Artifact. # noqa: E501

Return type bool

property artifactory(*self*)

Gets the artifactory of this V1alpha1Artifact. # noqa: E501

Returns The artifactory of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1ArtifactoryArtifact](#)

property git(*self*)

Gets the git of this V1alpha1Artifact. # noqa: E501

Returns The git of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1GitArtifact](#)

property global_name(*self*)

Gets the global_name of this V1alpha1Artifact. # noqa: E501

GlobalName exports an output artifact to the global scope, making it available as ‘{{workflow.outputs.artifacts.XXXX}}’ and in workflow.status.outputs.artifacts # noqa: E501

Returns The global_name of this V1alpha1Artifact. # noqa: E501

Return type str

property hdfs(*self*)

Gets the hdfs of this V1alpha1Artifact. # noqa: E501

Returns The hdf5 of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1HDFSArtifact](#)

property `http(self)`

Gets the http of this V1alpha1Artifact. # noqa: E501

Returns The http of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1HTTPArtifact](#)

property `mode(self)`

Gets the mode of this V1alpha1Artifact. # noqa: E501

mode bits to use on this file, must be a value between 0 and 0777 set when loading input artifacts. # noqa: E501

Returns The mode of this V1alpha1Artifact. # noqa: E501

Return type int

property `name(self)`

Gets the name of this V1alpha1Artifact. # noqa: E501

name of the artifact. must be unique within a template's inputs/outputs. # noqa: E501

Returns The name of this V1alpha1Artifact. # noqa: E501

Return type str

property `optional(self)`

Gets the optional of this V1alpha1Artifact. # noqa: E501

Make Artifacts optional, if Artifacts doesn't generate or exist # noqa: E501

Returns The optional of this V1alpha1Artifact. # noqa: E501

Return type bool

property `path(self)`

Gets the path of this V1alpha1Artifact. # noqa: E501

Path is the container path to the artifact # noqa: E501

Returns The path of this V1alpha1Artifact. # noqa: E501

Return type str

property `raw(self)`

Gets the raw of this V1alpha1Artifact. # noqa: E501

Returns The raw of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1RawArtifact](#)

property `s3(self)`

Gets the s3 of this V1alpha1Artifact. # noqa: E501

Returns The s3 of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1S3Artifact](#)

to_dict(self)

Returns the model properties as a dict

to_str(self)

Returns the string representation of the model

attribute_map

property concurrency_policy(self)
Gets the concurrency_policy of this V1alpha1CronWorkflowSpec. # noqa: E501
Returns The concurrency_policy of this V1alpha1CronWorkflowSpec. # noqa: E501
Return type str

property failed_jobs_history_limit(self)
Gets the failed_jobs_history_limit of this V1alpha1CronWorkflowSpec. # noqa: E501
Returns The failed_jobs_history_limit of this V1alpha1CronWorkflowSpec. # noqa: E501
Return type int

property schedule(self)
Gets the schedule of this V1alpha1CronWorkflowSpec. # noqa: E501
Returns The schedule of this V1alpha1CronWorkflowSpec. # noqa: E501
Return type str

property starting_deadline_seconds(self)
Gets the starting_deadline_seconds of this V1alpha1CronWorkflowSpec. # noqa: E501
StartingDeadlineSeconds is the K8s-style deadline that will limit the time a CronWorkflow will be run after its original scheduled time if it is missed. # noqa: E501
Returns The starting_deadline_seconds of this V1alpha1CronWorkflowSpec. # noqa: E501
Return type str

property successful_jobs_history_limit (self)
Gets the successful_jobs_history_limit of this V1alpha1CronWorkflowSpec. # noqa: E501

Returns The successful_jobs_history_limit of this V1alpha1CronWorkflowSpec. # noqa: E501

Return type int

property suspend (self)
Gets the suspend of this V1alpha1CronWorkflowSpec. # noqa: E501

Returns The suspend of this V1alpha1CronWorkflowSpec. # noqa: E501

Return type bool

property timezone (self)
Gets the timezone of this V1alpha1CronWorkflowSpec. # noqa: E501

Timezone is the timezone against which the cron schedule will be calculated, e.g. “Asia/Tokyo”. Default is machine’s local time. # noqa: E501

Returns The timezone of this V1alpha1CronWorkflowSpec. # noqa: E501

Return type str

property workflow_meta (self)
Gets the workflow_meta of this V1alpha1CronWorkflowSpec. # noqa: E501

Returns The workflow_meta of this V1alpha1CronWorkflowSpec. # noqa: E501

Return type kubernetes.client.models.V1ObjectMeta

property workflow_spec (self)
Gets the workflow_spec of this V1alpha1CronWorkflowSpec. # noqa: E501

Returns The workflow_spec of this V1alpha1CronWorkflowSpec. # noqa: E501

Return type [V1alpha1WorkflowSpec](#)

to_dict (self)
Returns the model properties as a dict

to_str (self)
Returns the string representation of the model

V1alpha1DAGTask - a model defined in OpenAPI

openapi_types

attribute_map

property arguments (self)

Gets the arguments of this V1alpha1DAGTask. # noqa: E501

Returns The arguments of this V1alpha1DAGTask. # noqa: E501

Return type [V1alpha1Arguments](#)

property continue_on (self)

Gets the continue_on of this V1alpha1DAGTask. # noqa: E501

Returns The continue_on of this V1alpha1DAGTask. # noqa: E501

Return type [V1alpha1ContinueOn](#)

property dependencies (self)

Gets the dependencies of this V1alpha1DAGTask. # noqa: E501

Dependencies are name of other targets which this depends on # noqa: E501

Returns The dependencies of this V1alpha1DAGTask. # noqa: E501

Return type list[str]

property name (self)

Gets the name of this V1alpha1DAGTask. # noqa: E501

Name is the name of the target # noqa: E501

Returns The name of this V1alpha1DAGTask. # noqa: E501

Return type str

property template (self)

Gets the template of this V1alpha1DAGTask. # noqa: E501

Name of template to execute # noqa: E501

Returns The template of this V1alpha1DAGTask. # noqa: E501

Return type str

property template_ref (self)

Gets the template_ref of this V1alpha1DAGTask. # noqa: E501

Returns The template_ref of this V1alpha1DAGTask. # noqa: E501

Return type [V1alpha1TemplateRef](#)

property when (self)

Gets the when of this V1alpha1DAGTask. # noqa: E501

When is an expression in which the task should conditionally execute # noqa: E501

Returns The when of this V1alpha1DAGTask. # noqa: E501

Return type str

property with_items (self)

Gets the with_items of this V1alpha1DAGTask. # noqa: E501

WithItems expands a task into multiple parallel tasks from the items in the list # noqa: E501

Returns The with_items of this V1alpha1DAGTask. # noqa: E501

Return type list[str]

property with_param (self)

Gets the with_param of this V1alpha1DAGTask. # noqa: E501

WithParam expands a task into multiple parallel tasks from the value in the parameter, which is expected to be a JSON list. # noqa: E501

Returns The with_param of this V1alpha1DAGTask. # noqa: E501

Return type str

property with_sequence (self)

Gets the with_sequence of this V1alpha1DAGTask. # noqa: E501

Returns The with_sequence of this V1alpha1DAGTask. # noqa: E501

Return type V1alpha1Sequence

to_dict (self)

Returns the model properties as a dict

to_str (self)

Returns the string representation of the model

V1alpha1DAGTemplate - a model defined in OpenAPI

openapi_types

attribute_map

property fail_fast (self)

Gets the fail_fast of this V1alpha1DAGTemplate. # noqa: E501

This flag is for DAG logic. The DAG logic has a built-in “fail fast” feature to stop scheduling new steps, as soon as it detects that one of the DAG nodes is failed. Then it waits until all DAG nodes are completed before failing the DAG itself. The FailFast flag default is true, if set to false, it will allow a DAG to run all branches of the DAG to completion (either success or failure), regardless of the failed outcomes of branches in the DAG. More info and example about this feature at [# noqa: E501](https://github.com/argoproj/argo/issues/1442)

Returns The fail_fast of this V1alpha1DAGTemplate. # noqa: E501

Return type bool

property target (self)

Gets the target of this V1alpha1DAGTemplate. # noqa: E501

Target are one or more names of targets to execute in a DAG # noqa: E501

Returns The target of this V1alpha1DAGTemplate. # noqa: E501

Return type str

property tasks (self)

Gets the tasks of this V1alpha1DAGTemplate. # noqa: E501

Tasks are a list of DAG tasks # noqa: E501

Returns The tasks of this V1alpha1DAGTemplate. # noqa: E501

Return type list[V1alpha1DAGTask]

to_dict (self)

Returns the model properties as a dict

to_str (self)

Returns the string representation of the model

`V1alpha1GitArtifact` - a model defined in OpenAPI

`openapi_types`

`attribute_map`

`property depth(self)`

Gets the depth of this `V1alpha1GitArtifact`. # noqa: E501

Depth specifies clones/fetches should be shallow and include the given number of commits from the branch tip # noqa: E501

Returns The depth of this `V1alpha1GitArtifact`. # noqa: E501

Return type `int`

`property fetch(self)`

Gets the fetch of this `V1alpha1GitArtifact`. # noqa: E501

Fetch specifies a number of refs that should be fetched before checkout # noqa: E501

Returns The fetch of this `V1alpha1GitArtifact`. # noqa: E501

Return type `list[str]`

`property insecure_ignore_host_key(self)`

Gets the `insecure_ignore_host_key` of this `V1alpha1GitArtifact`. # noqa: E501

`InsecureIgnoreHostKey` disables SSH strict host key checking during git clone # noqa: E501

Returns The `insecure_ignore_host_key` of this `V1alpha1GitArtifact`. # noqa: E501

Return type `bool`

```
property password_secret (self)
    Gets the password_secret of this V1alpha1GitArtifact. # noqa: E501

    Returns The password_secret of this V1alpha1GitArtifact. # noqa: E501
    Return type kubernetes.client.models.V1SecretKeySelector

property repo (self)
    Gets the repo of this V1alpha1GitArtifact. # noqa: E501

    Repo is the git repository # noqa: E501

    Returns The repo of this V1alpha1GitArtifact. # noqa: E501
    Return type str

property revision (self)
    Gets the revision of this V1alpha1GitArtifact. # noqa: E501

    Revision is the git commit, tag, branch to checkout # noqa: E501

    Returns The revision of this V1alpha1GitArtifact. # noqa: E501
    Return type str

property ssh_private_key_secret (self)
    Gets the ssh_private_key_secret of this V1alpha1GitArtifact. # noqa: E501

    Returns The ssh_private_key_secret of this V1alpha1GitArtifact. # noqa: E501
    Return type kubernetes.client.models.V1SecretKeySelector

property username_secret (self)
    Gets the username_secret of this V1alpha1GitArtifact. # noqa: E501

    Returns The username_secret of this V1alpha1GitArtifact. # noqa: E501
    Return type kubernetes.client.models.V1SecretKeySelector

to_dict (self)
    Returns the model properties as a dict

to_str (self)
    Returns the string representation of the model
```

V1alpha1HDFSArtifact - a model defined in OpenAPI

openapi_types

attribute_map

property addresses (self)

Gets the addresses of this V1alpha1HDFSArtifact. # noqa: E501

Addresses is accessible addresses of HDFS name nodes # noqa: E501

Returns The addresses of this V1alpha1HDFSArtifact. # noqa: E501

Return type list[str]

property force (self)

Gets the force of this V1alpha1HDFSArtifact. # noqa: E501

Force copies a file forcibly even if it exists (default: false) # noqa: E501

Returns The force of this V1alpha1HDFSArtifact. # noqa: E501

Return type bool

property hdfs_user (self)

Gets the hdfs_user of this V1alpha1HDFSArtifact. # noqa: E501

HDFSUser is the user to access HDFS file system. It is ignored if either ccache or keytab is used. # noqa: E501

Returns The hdfs_user of this V1alpha1HDFSArtifact. # noqa: E501

Return type str

property krb_c_cache_secret (self)

Gets the krb_c_cache_secret of this V1alpha1HDFSArtifact. # noqa: E501

Returns The krb_c_cache_secret of this V1alpha1HDFSArtifact. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

property krb_config_config_map (self)

Gets the krb_config_config_map of this V1alpha1HDFSArtifact. # noqa: E501

Returns The krb_config_config_map of this V1alpha1HDFSArtifact. # noqa: E501

Return type kubernetes.client.models.V1ConfigMapKeySelector

property `krb_keytab_secret(self)`
Gets the krb_keytab_secret of this V1alpha1HDFSArtifact. # noqa: E501

Returns The krb_keytab_secret of this V1alpha1HDFSArtifact. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

property `krb_realm(self)`
Gets the krb_realm of this V1alpha1HDFSArtifact. # noqa: E501

KrbRealm is the Kerberos realm used with Kerberos keytab It must be set if keytab is used. # noqa: E501

Returns The krb_realm of this V1alpha1HDFSArtifact. # noqa: E501

Return type str

property `krb_service_principal_name(self)`
Gets the krb_service_principal_name of this V1alpha1HDFSArtifact. # noqa: E501

KrbServicePrincipalName is the principal name of Kerberos service It must be set if either ccache or keytab is used. # noqa: E501

Returns The krb_service_principal_name of this V1alpha1HDFSArtifact. # noqa: E501

Return type str

property `krb_username(self)`
Gets the krb_username of this V1alpha1HDFSArtifact. # noqa: E501

KrbUsername is the Kerberos username used with Kerberos keytab It must be set if keytab is used. # noqa: E501

Returns The krb_username of this V1alpha1HDFSArtifact. # noqa: E501

Return type str

property `path(self)`
Gets the path of this V1alpha1HDFSArtifact. # noqa: E501

Path is a file path in HDFS # noqa: E501

Returns The path of this V1alpha1HDFSArtifact. # noqa: E501

Return type str

to_dict(self)
Returns the model properties as a dict

to_str(self)
Returns the string representation of the model

        Return type kubernetes.client.models.V1SecretKeySelector

property krb_config_config_map (self)
    Gets the krb_config_config_map of this V1alpha1HDFSKrbConfig. # noqa: E501
        Returns The krb_config_config_map of this V1alpha1HDFSKrbConfig. # noqa: E501
        Return type kubernetes.client.models.V1ConfigMapKeySelector

property krb_keytab_secret (self)
    Gets the krb_keytab_secret of this V1alpha1HDFSKrbConfig. # noqa: E501
        Returns The krb_keytab_secret of this V1alpha1HDFSKrbConfig. # noqa: E501
        Return type kubernetes.client.models.V1SecretKeySelector

property krb_realm (self)
    Gets the krb_realm of this V1alpha1HDFSKrbConfig. # noqa: E501
    KrbRealm is the Kerberos realm used with Kerberos keytab It must be set if keytab is used. # noqa: E501
        Returns The krb_realm of this V1alpha1HDFSKrbConfig. # noqa: E501
        Return type str

property krb_service_principal_name (self)
    Gets the krb_service_principal_name of this V1alpha1HDFSKrbConfig. # noqa: E501
    KrbServicePrincipalName is the principal name of Kerberos service It must be set if either ccache or
    keytab is used. # noqa: E501
        Returns The krb_service_principal_name of this V1alpha1HDFSKrbConfig. # noqa: E501
        Return type str

property krb_username (self)
    Gets the krb_username of this V1alpha1HDFSKrbConfig. # noqa: E501
    KrbUsername is the Kerberos username used with Kerberos keytab It must be set if keytab is used. # noqa:
    E501
        Returns The krb_username of this V1alpha1HDFSKrbConfig. # noqa: E501
        Return type str

to_dict (self)
    Returns the model properties as a dict

to_str (self)
    Returns the string representation of the model

V1alpha1NodeStatus - a model defined in OpenAPI

openapi_types

attribute_map

property boundary_id(self)

Gets the boundary_id of this V1alpha1NodeStatus. # noqa: E501

BoundaryID indicates the node ID of the associated template root node in which this node belongs to # noqa: E501

Returns The boundary_id of this V1alpha1NodeStatus. # noqa: E501

Return type str

property `children(self)`

Gets the children of this V1alpha1NodeStatus. # noqa: E501

Children is a list of child node IDs # noqa: E501

Returns The children of this V1alpha1NodeStatus. # noqa: E501

Return type list[str]

property `daemoned(self)`

Gets the daemoned of this V1alpha1NodeStatus. # noqa: E501

Daemoned tracks whether or not this node was daemoned and need to be terminated # noqa: E501

Returns The daemoned of this V1alpha1NodeStatus. # noqa: E501

Return type bool

property `display_name(self)`

Gets the display_name of this V1alpha1NodeStatus. # noqa: E501

DisplayName is a human readable representation of the node. Unique within a template boundary # noqa: E501

Returns The display_name of this V1alpha1NodeStatus. # noqa: E501

Return type str

property `finished_at(self)`

Gets the finished_at of this V1alpha1NodeStatus. # noqa: E501

Returns The finished_at of this V1alpha1NodeStatus. # noqa: E501

Return type IoK8sApimachineryPkgApisMetaV1Time

property `id(self)`

Gets the id of this V1alpha1NodeStatus. # noqa: E501

ID is a unique identifier of a node within the workflow It is implemented as a hash of the node name, which makes the ID deterministic # noqa: E501

Returns The id of this V1alpha1NodeStatus. # noqa: E501

Return type str

property `inputs(self)`

Gets the inputs of this V1alpha1NodeStatus. # noqa: E501

Returns The inputs of this V1alpha1NodeStatus. # noqa: E501

Return type [V1alpha1Inputs](#)

property `message(self)`

Gets the message of this V1alpha1NodeStatus. # noqa: E501

A human readable message indicating details about why the node is in this condition. # noqa: E501

Returns The message of this V1alpha1NodeStatus. # noqa: E501

Return type str

property name (*self*)

Gets the name of this V1alpha1NodeStatus. # noqa: E501

Name is unique name in the node tree used to generate the node ID # noqa: E501

Returns The name of this V1alpha1NodeStatus. # noqa: E501

Return type str

property outbound_nodes (*self*)

Gets the outbound_nodes of this V1alpha1NodeStatus. # noqa: E501

OutboundNodes tracks the node IDs which are considered “outbound” nodes to a template invocation. For every invocation of a template, there are nodes which we considered as “outbound”. Essentially, these are last nodes in the execution sequence to run, before the template is considered completed. These nodes are then connected as parents to a following step. In the case of single pod steps (i.e. container, script, resource templates), this list will be nil since the pod itself is already considered the “outbound” node. In the case of DAGs, outbound nodes are the “target” tasks (tasks with no children). In the case of steps, outbound nodes are all the containers involved in the last step group. NOTE: since templates are composable, the list of outbound nodes are carried upwards when a DAG/steps template invokes another DAG/steps template. In other words, the outbound nodes of a template, will be a superset of the outbound nodes of its last children. # noqa: E501

Returns The outbound_nodes of this V1alpha1NodeStatus. # noqa: E501

Return type list[str]

property outputs (*self*)

Gets the outputs of this V1alpha1NodeStatus. # noqa: E501

Returns The outputs of this V1alpha1NodeStatus. # noqa: E501

Return type *V1alpha1Outputs*

property phase (*self*)

Gets the phase of this V1alpha1NodeStatus. # noqa: E501

Phase a simple, high-level summary of where the node is in its lifecycle. Can be used as a state machine. # noqa: E501

Returns The phase of this V1alpha1NodeStatus. # noqa: E501

Return type str

property pod_ip (*self*)

Gets the pod_ip of this V1alpha1NodeStatus. # noqa: E501

PodIP captures the IP of the pod for daemonized steps # noqa: E501

Returns The pod_ip of this V1alpha1NodeStatus. # noqa: E501

Return type str

property started_at (*self*)

Gets the started_at of this V1alpha1NodeStatus. # noqa: E501

Returns The started_at of this V1alpha1NodeStatus. # noqa: E501

Return type IoK8sApimachineryPkgApisMetaV1Time

property stored_template_id (*self*)

Gets the stored_template_id of this V1alpha1NodeStatus. # noqa: E501

StoredTemplateID is the ID of stored template. DEPRECATED: This value is not used anymore. # noqa: E501

Returns The stored_template_id of this V1alpha1NodeStatus. # noqa: E501

Return type str

property template_name(self)

Gets the template_name of this V1alpha1NodeStatus. # noqa: E501

TemplateName is the template name which this node corresponds to. Not applicable to virtual nodes (e.g. Retry, StepGroup) # noqa: E501

Returns The template_name of this V1alpha1NodeStatus. # noqa: E501

Return type str

property template_ref(self)

Gets the template_ref of this V1alpha1NodeStatus. # noqa: E501

Returns The template_ref of this V1alpha1NodeStatus. # noqa: E501

Return type [V1alpha1TemplateRef](#)

property template_scope(self)

Gets the template_scope of this V1alpha1NodeStatus. # noqa: E501

TemplateScope is the template scope in which the template of this node was retrieved. # noqa: E501

Returns The template_scope of this V1alpha1NodeStatus. # noqa: E501

Return type str

property type(self)

Gets the type of this V1alpha1NodeStatus. # noqa: E501

Type indicates type of node # noqa: E501

Returns The type of this V1alpha1NodeStatus. # noqa: E501

Return type str

property workflow_template_name(self)

Gets the workflow_template_name of this V1alpha1NodeStatus. # noqa: E501

WorkflowTemplateName is the WorkflowTemplate resource name on which the resolved template of this node is retrieved. DEPRECATED: This value is not used anymore. # noqa: E501

Returns The workflow_template_name of this V1alpha1NodeStatus. # noqa: E501

Return type str

to_dict(self)

Returns the model properties as a dict

to_str(self)

Returns the string representation of the model

V1alpha1Parameter - a model defined in OpenAPI

openapi_types

attribute_map

property default(self)

Gets the default of this V1alpha1Parameter. # noqa: E501

Default is the default value to use for an input parameter if a value was not supplied # noqa: E501

Returns The default of this V1alpha1Parameter. # noqa: E501

Return type str

property global_name(self)

Gets the global_name of this V1alpha1Parameter. # noqa: E501

GlobalName exports an output parameter to the global scope, making it available as ‘{{workflow.outputs.parameters.XXXX}}’ and in workflow.status.outputs.parameters # noqa: E501

Returns The global_name of this V1alpha1Parameter. # noqa: E501

Return type str

property name(self)

Gets the name of this V1alpha1Parameter. # noqa: E501

Name is the parameter name # noqa: E501

Returns The name of this V1alpha1Parameter. # noqa: E501

Return type str

property value(self)

Gets the value of this V1alpha1Parameter. # noqa: E501

Value is the literal value to use for the parameter. If specified in the context of an input parameter, the value takes precedence over any passed values # noqa: E501

Returns The value of this V1alpha1Parameter. # noqa: E501

Return type str

property value_from(self)
Gets the value_from of this V1alpha1Parameter. # noqa: E501

Returns The value_from of this V1alpha1Parameter. # noqa: E501

Return type *V1alpha1ValueFrom*

to_dict(self)
Returns the model properties as a dict

to_str(self)
Returns the string representation of the model

`V1alpha1ResourceTemplate` - a model defined in OpenAPI

openapi_types

attribute_map

property action(self)

Gets the action of this `V1alpha1ResourceTemplate`. # noqa: E501

Action is the action to perform to the resource. Must be one of: get, create, apply, delete, replace, patch # noqa: E501

Returns The action of this `V1alpha1ResourceTemplate`. # noqa: E501

Return type str

property failure_condition(self)

Gets the failure_condition of this `V1alpha1ResourceTemplate`. # noqa: E501

FailureCondition is a label selector expression which describes the conditions of the k8s resource in which the step was considered failed # noqa: E501

Returns The failure_condition of this `V1alpha1ResourceTemplate`. # noqa: E501

Return type str

property manifest(self)

Gets the manifest of this `V1alpha1ResourceTemplate`. # noqa: E501

Manifest contains the kubernetes manifest # noqa: E501

Returns The manifest of this `V1alpha1ResourceTemplate`. # noqa: E501

Return type str

property merge_strategy (self)
Gets the merge_strategy of this V1alpha1ResourceTemplate. # noqa: E501
MergeStrategy is the strategy used to merge a patch. It defaults to “strategic” Must be one of: strategic, merge, json # noqa: E501

Returns The merge_strategy of this V1alpha1ResourceTemplate. # noqa: E501

Return type str

property set_owner_reference (self)
Gets the set_owner_reference of this V1alpha1ResourceTemplate. # noqa: E501
SetOwnerReference sets the reference to the workflow on the OwnerReference of generated resource. # noqa: E501

Returns The set_owner_reference of this V1alpha1ResourceTemplate. # noqa: E501

Return type bool

property success_condition (self)
Gets the success_condition of this V1alpha1ResourceTemplate. # noqa: E501
SuccessCondition is a label selector expression which describes the conditions of the k8s resource in which it is acceptable to proceed to the following step # noqa: E501

Returns The success_condition of this V1alpha1ResourceTemplate. # noqa: E501

Return type str

to_dict (self)
Returns the model properties as a dict

to_str (self)
Returns the string representation of the model

V1alpha1S3Artifact - a model defined in OpenAPI

openapi_types

attribute_map

```
property access_key_secret(self)
```

Gets the access_key_secret of this V1alpha1S3Artifact. # noqa: E501

Returns The access_key_secret of this V1alpha1S3Artifact. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

```
property bucket(self)
```

Gets the bucket of this V1alpha1S3Artifact. # noqa: E501

Bucket is the name of the bucket # noqa: E501

Returns The bucket of this V1alpha1S3Artifact. # noqa: E501

Return type str

```
property endpoint (self)
    Gets the endpoint of this V1alpha1S3Artifact. # noqa: E501
    Endpoint is the hostname of the bucket endpoint # noqa: E501
    Returns The endpoint of this V1alpha1S3Artifact. # noqa: E501
    Return type str

property insecure (self)
    Gets the insecure of this V1alpha1S3Artifact. # noqa: E501
    Insecure will connect to the service with TLS # noqa: E501
    Returns The insecure of this V1alpha1S3Artifact. # noqa: E501
    Return type bool

property key (self)
    Gets the key of this V1alpha1S3Artifact. # noqa: E501
    Key is the key in the bucket where the artifact resides # noqa: E501
    Returns The key of this V1alpha1S3Artifact. # noqa: E501
    Return type str

property region (self)
    Gets the region of this V1alpha1S3Artifact. # noqa: E501
    Region contains the optional bucket region # noqa: E501
    Returns The region of this V1alpha1S3Artifact. # noqa: E501
    Return type str

property role_arn (self)
    Gets the role_arn of this V1alpha1S3Artifact. # noqa: E501
    RoleARN is the Amazon Resource Name (ARN) of the role to assume. # noqa: E501
    Returns The role_arn of this V1alpha1S3Artifact. # noqa: E501
    Return type str

property secret_key_secret (self)
    Gets the secret_key_secret of this V1alpha1S3Artifact. # noqa: E501
    Returns The secret_key_secret of this V1alpha1S3Artifact. # noqa: E501
    Return type kubernetes.client.models.V1SecretKeySelector

to_dict (self)
    Returns the model properties as a dict
to_str (self)
    Returns the string representation of the model

V1alpha1S3Bucket - a model defined in OpenAPI

openapi_types

attribute_map

property access_key_secret (self)

Gets the access_key_secret of this V1alpha1S3Bucket. # noqa: E501

Returns The access_key_secret of this V1alpha1S3Bucket. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

property bucket (self)

Gets the bucket of this V1alpha1S3Bucket. # noqa: E501

Bucket is the name of the bucket # noqa: E501

Returns The bucket of this V1alpha1S3Bucket. # noqa: E501

Return type str

property endpoint (self)

Gets the endpoint of this V1alpha1S3Bucket. # noqa: E501

Endpoint is the hostname of the bucket endpoint # noqa: E501

Returns The endpoint of this V1alpha1S3Bucket. # noqa: E501

Return type str

property insecure (self)

Gets the insecure of this V1alpha1S3Bucket. # noqa: E501

Insecure will connect to the service with TLS # noqa: E501

Returns The insecure of this V1alpha1S3Bucket. # noqa: E501

Return type bool

```
property region (self)
    Gets the region of this V1alpha1S3Bucket. # noqa: E501
    Region contains the optional bucket region # noqa: E501
    Returns The region of this V1alpha1S3Bucket. # noqa: E501
    Return type str

property role_arn (self)
    Gets the role_arn of this V1alpha1S3Bucket. # noqa: E501
    RoleARN is the Amazon Resource Name (ARN) of the role to assume. # noqa: E501
    Returns The role_arn of this V1alpha1S3Bucket. # noqa: E501
    Return type str

property secret_key_secret (self)
    Gets the secret_key_secret of this V1alpha1S3Bucket. # noqa: E501
    Returns The secret_key_secret of this V1alpha1S3Bucket. # noqa: E501
    Return type kubernetes.client.models.V1SecretKeySelector

to_dict (self)
    Returns the model properties as a dict

to_str (self)
    Returns the string representation of the model
```

V1alpha1ScriptTemplate - a model defined in OpenAPI

openapi_types

attribute_map

property args (self)

Gets the args of this V1alpha1ScriptTemplate. # noqa: E501

Arguments to the endpoint. The docker image's CMD is used if this is not provided. Variable references \$(VAR_NAME) are expanded using the container's environment. If a variable cannot be resolved, the reference in the input string will be unchanged. The \$(VAR_NAME) syntax can be escaped with a double

\$\$, ie: \$\$({{VAR_NAME}}). Escaped references will never be expanded, regardless of whether the variable exists or not. Cannot be updated. More info: <https://kubernetes.io/docs/tasks/inject-data-application/define-command-argument-container/#running-a-command-in-a-shell> # noqa: E501

Returns The args of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[str]

property command (*self*)

Gets the command of this V1alpha1ScriptTemplate. # noqa: E501

Entrypoint array. Not executed within a shell. The docker image's ENTRYPOINT is used if this is not provided. Variable references \${{VAR_NAME}} are expanded using the container's environment. If a variable cannot be resolved, the reference in the input string will be unchanged. The \${{VAR_NAME}} syntax can be escaped with a double \$\$, ie: \$\$({{VAR_NAME}}). Escaped references will never be expanded, regardless of whether the variable exists or not. Cannot be updated. More info: <https://kubernetes.io/docs/tasks/inject-data-application/define-command-argument-container/#running-a-command-in-a-shell> # noqa: E501

Returns The command of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[str]

property env (*self*)

Gets the env of this V1alpha1ScriptTemplate. # noqa: E501

List of environment variables to set in the container. Cannot be updated. # noqa: E501

Returns The env of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[kubernetes.client.models.V1EnvVar]

property env_from (*self*)

Gets the env_from of this V1alpha1ScriptTemplate. # noqa: E501

List of sources to populate environment variables in the container. The keys defined within a source must be a C_IDENTIFIER. All invalid keys will be reported as an event when the container is starting. When a key exists in multiple sources, the value associated with the last source will take precedence. Values defined by an Env with a duplicate key will take precedence. Cannot be updated. # noqa: E501

Returns The env_from of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[kubernetes.client.models.V1EnvFromSource]

property image (*self*)

Gets the image of this V1alpha1ScriptTemplate. # noqa: E501

Docker image name. More info: <https://kubernetes.io/docs/concepts/containers/images> This field is optional to allow higher level config management to default or override container images in workload controllers like Deployments and StatefulSets. # noqa: E501

Returns The image of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property image_pull_policy (*self*)

Gets the image_pull_policy of this V1alpha1ScriptTemplate. # noqa: E501

Image pull policy. One of Always, Never, IfNotPresent. Defaults to Always if :latest tag is specified, or IfNotPresent otherwise. Cannot be updated. More info: <https://kubernetes.io/docs/concepts/containers/images#updating-images> # noqa: E501

Returns The image_pull_policy of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property lifecycle (self)

Gets the lifecycle of this V1alpha1ScriptTemplate. # noqa: E501

Returns The lifecycle of this V1alpha1ScriptTemplate. # noqa: E501

Return type kubernetes.client.models.V1Lifecycle

property liveness_probe (self)

Gets the liveness_probe of this V1alpha1ScriptTemplate. # noqa: E501

Returns The liveness_probe of this V1alpha1ScriptTemplate. # noqa: E501

Return type kubernetes.client.models.V1Probe

property name (self)

Gets the name of this V1alpha1ScriptTemplate. # noqa: E501

Name of the container specified as a DNS_LABEL. Each container in a pod must have a unique name (DNS_LABEL). Cannot be updated. # noqa: E501

Returns The name of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property ports (self)

Gets the ports of this V1alpha1ScriptTemplate. # noqa: E501

List of ports to expose from the container. Exposing a port here gives the system additional information about the network connections a container uses, but is primarily informational. Not specifying a port here DOES NOT prevent that port from being exposed. Any port which is listening on the default “0.0.0.0” address inside a container will be accessible from the network. Cannot be updated. # noqa: E501

Returns The ports of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[kubernetes.client.models.V1ContainerPort]

property readiness_probe (self)

Gets the readiness_probe of this V1alpha1ScriptTemplate. # noqa: E501

Returns The readiness_probe of this V1alpha1ScriptTemplate. # noqa: E501

Return type kubernetes.client.models.V1Probe

property resources (self)

Gets the resources of this V1alpha1ScriptTemplate. # noqa: E501

Returns The resources of this V1alpha1ScriptTemplate. # noqa: E501

Return type kubernetes.client.models.V1ResourceRequirements

property security_context (self)

Gets the security_context of this V1alpha1ScriptTemplate. # noqa: E501

Returns The security_context of this V1alpha1ScriptTemplate. # noqa: E501

Return type kubernetes.client.models.V1SecurityContext

property source (self)

Gets the source of this V1alpha1ScriptTemplate. # noqa: E501

Source contains the source code of the script to execute # noqa: E501

Returns The source of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property stdin(self)

Gets the stdin of this V1alpha1ScriptTemplate. # noqa: E501

Whether this container should allocate a buffer for stdin in the container runtime. If this is not set, reads from stdin in the container will always result in EOF. Default is false. # noqa: E501

Returns The stdin of this V1alpha1ScriptTemplate. # noqa: E501

Return type bool

property stdin_once(self)

Gets the stdin_once of this V1alpha1ScriptTemplate. # noqa: E501

Whether the container runtime should close the stdin channel after it has been opened by a single attach. When stdin is true the stdin stream will remain open across multiple attach sessions. If stdinOnce is set to true, stdin is opened on container start, is empty until the first client attaches to stdin, and then remains open and accepts data until the client disconnects, at which time stdin is closed and remains closed until the container is restarted. If this flag is false, a container processes that reads from stdin will never receive an EOF. Default is false # noqa: E501

Returns The stdin_once of this V1alpha1ScriptTemplate. # noqa: E501

Return type bool

property termination_message_path(self)

Gets the termination_message_path of this V1alpha1ScriptTemplate. # noqa: E501

Optional: Path at which the file to which the container’s termination message will be written is mounted into the container’s filesystem. Message written is intended to be brief final status, such as an assertion failure message. Will be truncated by the node if greater than 4096 bytes. The total message length across all containers will be limited to 12kb. Defaults to /dev/termination-log. Cannot be updated. # noqa: E501

Returns The termination_message_path of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property termination_message_policy(self)

Gets the termination_message_policy of this V1alpha1ScriptTemplate. # noqa: E501

Indicate how the termination message should be populated. File will use the contents of terminationMessagePath to populate the container status message on both success and failure. FallbackToLogsOnError will use the last chunk of container log output if the termination message file is empty and the container exited with an error. The log output is limited to 2048 bytes or 80 lines, whichever is smaller. Defaults to File. Cannot be updated. # noqa: E501

Returns The termination_message_policy of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property tty(self)

Gets the tty of this V1alpha1ScriptTemplate. # noqa: E501

Whether this container should allocate a TTY for itself, also requires ‘stdin’ to be true. Default is false. # noqa: E501

Returns The tty of this V1alpha1ScriptTemplate. # noqa: E501

Return type bool

property volume_devices(self)

Gets the volume_devices of this V1alpha1ScriptTemplate. # noqa: E501

volumeDevices is the list of block devices to be used by the container. This is a beta feature. # noqa: E501

Returns The volume_devices of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[kubernetes.client.models.V1VolumeDevice]

property volume_mounts (self)
Gets the volume_mounts of this V1alpha1ScriptTemplate. # noqa: E501
Pod volumes to mount into the container's filesystem. Cannot be updated. # noqa: E501

Returns The volume_mounts of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[kubernetes.client.models.V1VolumeMount]

property working_dir (self)
Gets the working_dir of this V1alpha1ScriptTemplate. # noqa: E501
Container's working directory. If not specified, the container runtime's default will be used, which might be configured in the container image. Cannot be updated. # noqa: E501

Returns The working_dir of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

to_dict (self)
Returns the model properties as a dict

to_str (self)
Returns the string representation of the model

V1alpha1Sequence - a model defined in OpenAPI

openapi_types

attribute_map

property count (self)

Gets the count of this V1alpha1Sequence. # noqa: E501

Count is number of elements in the sequence (default: 0). Not to be used with end # noqa: E501

Returns The count of this V1alpha1Sequence. # noqa: E501

Return type str

property end(self)

Gets the end of this V1alpha1Sequence. # noqa: E501

Number at which to end the sequence (default: 0). Not to be used with Count # noqa: E501

Returns The end of this V1alpha1Sequence. # noqa: E501

Return type str

property format(self)

Gets the format of this V1alpha1Sequence. # noqa: E501

Format is a printf format string to format the value in the sequence # noqa: E501

Returns The format of this V1alpha1Sequence. # noqa: E501

Return type str

property start(self)

Gets the start of this V1alpha1Sequence. # noqa: E501

Number at which to start the sequence (default: 0) # noqa: E501

Returns The start of this V1alpha1Sequence. # noqa: E501

Return type str

to_dict(self)

Returns the model properties as a dict

to_str(self)

Returns the string representation of the model

1.1.1.1.109 argo.models.v1alpha1_suspend_template

V1alpha1SuspendTemplate - a model defined in OpenAPI

openapi_types**attribute_map****property duration(self)**

Gets the duration of this V1alpha1SuspendTemplate. # noqa: E501

Duration is the seconds to wait before automatically resuming a template # noqa: E501

Returns The duration of this V1alpha1SuspendTemplate. # noqa: E501

Return type int

to_dict(self)

Returns the model properties as a dict

to_str(self)

Returns the string representation of the model

V1alpha1Template - a model defined in OpenAPI

openapi_types

attribute_map

property active_deadline_seconds (self)

Gets the active_deadline_seconds of this V1alpha1Template. # noqa: E501

Optional duration in seconds relative to the StartTime that the pod may be active on a node before the system actively tries to terminate the pod; value must be positive integer This field is only applicable to container and script templates. # noqa: E501

Returns The active_deadline_seconds of this V1alpha1Template. # noqa: E501

Return type int

property affinity (self)

Gets the affinity of this V1alpha1Template. # noqa: E501

Returns The affinity of this V1alpha1Template. # noqa: E501

Return type kubernetes.client.models.V1Affinity

property archive_location (self)

Gets the archive_location of this V1alpha1Template. # noqa: E501

Returns The archive_location of this V1alpha1Template. # noqa: E501

Return type [V1alpha1ArtifactLocation](#)

property arguments (self)

Gets the arguments of this V1alpha1Template. # noqa: E501

Returns The arguments of this V1alpha1Template. # noqa: E501

Return type [V1alpha1Arguments](#)

property automount_service_account_token (self)

Gets the automount_service_account_token of this V1alpha1Template. # noqa: E501

AutomountServiceAccountToken indicates whether a service account token should be automatically mounted in pods. ServiceAccountName of ExecutorConfig must be specified if this value is false. # noqa: E501

Returns The automount_service_account_token of this V1alpha1Template. # noqa: E501

Return type bool

property container (self)

Gets the container of this V1alpha1Template. # noqa: E501

Returns The container of this V1alpha1Template. # noqa: E501

Return type kubernetes.client.models.V1Container

property daemon (self)

Gets the daemon of this V1alpha1Template. # noqa: E501

Deamon will allow a workflow to proceed to the next step so long as the container reaches readiness # noqa: E501

Returns The daemon of this V1alpha1Template. # noqa: E501

Return type bool

property dag (self)

Gets the dag of this V1alpha1Template. # noqa: E501

Returns The dag of this V1alpha1Template. # noqa: E501

Return type [V1alpha1DAGTemplate](#)

property executor (self)

Gets the executor of this V1alpha1Template. # noqa: E501

Returns The executor of this V1alpha1Template. # noqa: E501

Return type [V1alpha1ExecutorConfig](#)

property host_aliases (self)

Gets the host_aliases of this V1alpha1Template. # noqa: E501

HostAliases is an optional list of hosts and IPs that will be injected into the pod spec # noqa: E501

Returns The host_aliases of this V1alpha1Template. # noqa: E501

Return type list[kubernetes.client.models.V1HostAlias]

property init_containers (self)

Gets the init_containers of this V1alpha1Template. # noqa: E501

InitContainers is a list of containers which run before the main container. # noqa: E501

Returns The init_containers of this V1alpha1Template. # noqa: E501

Return type list[V1alpha1UserContainer]

property inputs (self)

Gets the inputs of this V1alpha1Template. # noqa: E501

Returns The inputs of this V1alpha1Template. # noqa: E501

Return type [V1alpha1Inputs](#)

property metadata (self)

Gets the metadata of this V1alpha1Template. # noqa: E501

Returns The metadata of this V1alpha1Template. # noqa: E501

Return type [V1alpha1Metadata](#)

property name (self)

Gets the name of this V1alpha1Template. # noqa: E501

Name is the name of the template # noqa: E501

Returns The name of this V1alpha1Template. # noqa: E501

Return type str

property node_selector (self)

Gets the node_selector of this V1alpha1Template. # noqa: E501

NodeSelector is a selector to schedule this step of the workflow to be run on the selected node(s). Overrides the selector set at the workflow level. # noqa: E501

Returns The node_selector of this V1alpha1Template. # noqa: E501

Return type dict(str, str)

property outputs (self)

Gets the outputs of this V1alpha1Template. # noqa: E501

Returns The outputs of this V1alpha1Template. # noqa: E501

Return type [V1alpha1Outputs](#)

property parallelism(self)

Gets the parallelism of this V1alpha1Template. # noqa: E501

Parallelism limits the max total parallel pods that can execute at the same time within the boundaries of this template invocation. If additional steps/dag templates are invoked, the pods created by those templates will not be counted towards this total. # noqa: E501

Returns The parallelism of this V1alpha1Template. # noqa: E501

Return type int

property pod_spec_patch(self)

Gets the pod_spec_patch of this V1alpha1Template. # noqa: E501

PodSpecPatch holds strategic merge patch to apply against the pod spec. Allows parameterization of container fields which are not strings (e.g. resource limits). # noqa: E501

Returns The pod_spec_patch of this V1alpha1Template. # noqa: E501

Return type str

property priority(self)

Gets the priority of this V1alpha1Template. # noqa: E501

Priority to apply to workflow pods. # noqa: E501

Returns The priority of this V1alpha1Template. # noqa: E501

Return type int

property priority_class_name(self)

Gets the priority_class_name of this V1alpha1Template. # noqa: E501

PriorityClassName to apply to workflow pods. # noqa: E501

Returns The priority_class_name of this V1alpha1Template. # noqa: E501

Return type str

property resource(self)

Gets the resource of this V1alpha1Template. # noqa: E501

Returns The resource of this V1alpha1Template. # noqa: E501

Return type [V1alpha1ResourceTemplate](#)

property retry_strategy(self)

Gets the retry_strategy of this V1alpha1Template. # noqa: E501

Returns The retry_strategy of this V1alpha1Template. # noqa: E501

Return type [V1alpha1RetryStrategy](#)

property scheduler_name(self)

Gets the scheduler_name of this V1alpha1Template. # noqa: E501

If specified, the pod will be dispatched by specified scheduler. Or it will be dispatched by workflow scope scheduler if specified. If neither specified, the pod will be dispatched by default scheduler. # noqa: E501

Returns The scheduler_name of this V1alpha1Template. # noqa: E501

Return type str

property script (*self*)

Gets the script of this V1alpha1Template. # noqa: E501

Returns The script of this V1alpha1Template. # noqa: E501

Return type [V1alpha1ScriptTemplate](#)

property security_context (*self*)

Gets the security_context of this V1alpha1Template. # noqa: E501

Returns The security_context of this V1alpha1Template. # noqa: E501

Return type kubernetes.client.models.V1PodSecurityContext

property service_account_name (*self*)

Gets the service_account_name of this V1alpha1Template. # noqa: E501

ServiceAccountName to apply to workflow pods # noqa: E501

Returns The service_account_name of this V1alpha1Template. # noqa: E501

Return type str

property sidecars (*self*)

Gets the sidecars of this V1alpha1Template. # noqa: E501

Sidecars is a list of containers which run alongside the main container Sidecars are automatically killed when the main container completes # noqa: E501

Returns The sidecars of this V1alpha1Template. # noqa: E501

Return type list[[V1alpha1UserContainer](#)]

property steps (*self*)

Gets the steps of this V1alpha1Template. # noqa: E501

Steps define a series of sequential/parallel workflow steps # noqa: E501

Returns The steps of this V1alpha1Template. # noqa: E501

Return type list[list[[V1alpha1WorkflowStep](#)]]

property suspend (*self*)

Gets the suspend of this V1alpha1Template. # noqa: E501

Returns The suspend of this V1alpha1Template. # noqa: E501

Return type [V1alpha1SuspendTemplate](#)

property template (*self*)

Gets the template of this V1alpha1Template. # noqa: E501

Template is the name of the template which is used as the base of this template. # noqa: E501

Returns The template of this V1alpha1Template. # noqa: E501

Return type str

property template_ref (*self*)

Gets the template_ref of this V1alpha1Template. # noqa: E501

Returns The template_ref of this V1alpha1Template. # noqa: E501

Return type [V1alpha1TemplateRef](#)

property tolerations (*self*)

Gets the tolerations of this V1alpha1Template. # noqa: E501

Tolerations to apply to workflow pods. # noqa: E501

Returns The tolerations of this V1alpha1Template. # noqa: E501

Return type list[kubernetes.client.models.V1Toleration]

property volumes (self)

Gets the volumes of this V1alpha1Template. # noqa: E501

Volumes is a list of volumes that can be mounted by containers in a template. # noqa: E501

Returns The volumes of this V1alpha1Template. # noqa: E501

Return type list[kubernetes.client.models.V1Volume]

to_dict (self)

Returns the model properties as a dict

to_str (self)

Returns the string representation of the model

V1alpha1TemplateRef - a model defined in OpenAPI

openapi_types

attribute_map

property name (self)

Gets the name of this V1alpha1TemplateRef. # noqa: E501

Name is the resource name of the template. # noqa: E501

Returns The name of this V1alpha1TemplateRef. # noqa: E501

Return type str

property runtime_resolution (self)

Gets the runtime_resolution of this V1alpha1TemplateRef. # noqa: E501

RuntimeResolution skips validation at creation time. By enabling this option, you can create the referred workflow template before the actual runtime. # noqa: E501

Returns The runtime_resolution of this V1alpha1TemplateRef. # noqa: E501

Return type bool

property template(self)

Gets the template of this V1alpha1TemplateRef. # noqa: E501

Template is the name of referred template in the resource. # noqa: E501

Returns The template of this V1alpha1TemplateRef. # noqa: E501

Return type str

to_dict(self)

Returns the model properties as a dict

to_str(self)

Returns the string representation of the model

V1alpha1UserContainer - a model defined in OpenAPI

openapi_types

attribute_map

property args (self)

Gets the args of this V1alpha1UserContainer. # noqa: E501

Arguments to the endpoint. The docker image's CMD is used if this is not provided. Variable references \$(VAR_NAME) are expanded using the container's environment. If a variable cannot be resolved, the reference in the input string will be unchanged. The \$(VAR_NAME) syntax can be escaped with a double \$\$, ie: \$\$\$(VAR_NAME). Escaped references will never be expanded, regardless of whether the vari-

able exists or not. Cannot be updated. More info: <https://kubernetes.io/docs/tasks/inject-data-application/define-command-argument-container/#running-a-command-in-a-shell> # noqa: E501

Returns The args of this V1alpha1UserContainer. # noqa: E501

Return type list[str]

property command(*self*)

Gets the command of this V1alpha1UserContainer. # noqa: E501

Entrypoint array. Not executed within a shell. The docker image's ENTRYPOINT is used if this is not provided. Variable references \${VAR_NAME} are expanded using the container's environment. If a variable cannot be resolved, the reference in the input string will be unchanged. The \${VAR_NAME} syntax can be escaped with a double \$\$, ie: \$\$(\${VAR_NAME}). Escaped references will never be expanded, regardless of whether the variable exists or not. Cannot be updated. More info: <https://kubernetes.io/docs/tasks/inject-data-application/define-command-argument-container/#running-a-command-in-a-shell> # noqa: E501

Returns The command of this V1alpha1UserContainer. # noqa: E501

Return type list[str]

property env(*self*)

Gets the env of this V1alpha1UserContainer. # noqa: E501

List of environment variables to set in the container. Cannot be updated. # noqa: E501

Returns The env of this V1alpha1UserContainer. # noqa: E501

Return type list[kubernetes.client.models.V1EnvVar]

property env_from(*self*)

Gets the env_from of this V1alpha1UserContainer. # noqa: E501

List of sources to populate environment variables in the container. The keys defined within a source must be a C_IDENTIFIER. All invalid keys will be reported as an event when the container is starting. When a key exists in multiple sources, the value associated with the last source will take precedence. Values defined by an Env with a duplicate key will take precedence. Cannot be updated. # noqa: E501

Returns The env_from of this V1alpha1UserContainer. # noqa: E501

Return type list[kubernetes.client.models.V1EnvFromSource]

property image(*self*)

Gets the image of this V1alpha1UserContainer. # noqa: E501

Docker image name. More info: <https://kubernetes.io/docs/concepts/containers/images> This field is optional to allow higher level config management to default or override container images in workload controllers like Deployments and StatefulSets. # noqa: E501

Returns The image of this V1alpha1UserContainer. # noqa: E501

Return type str

property image_pull_policy(*self*)

Gets the image_pull_policy of this V1alpha1UserContainer. # noqa: E501

Image pull policy. One of Always, Never, IfNotPresent. Defaults to Always if :latest tag is specified, or IfNotPresent otherwise. Cannot be updated. More info: <https://kubernetes.io/docs/concepts/containers/images#updating-images> # noqa: E501

Returns The image_pull_policy of this V1alpha1UserContainer. # noqa: E501

Return type str

property lifecycle (self)

Gets the lifecycle of this V1alpha1UserContainer. # noqa: E501

Returns The lifecycle of this V1alpha1UserContainer. # noqa: E501

Return type kubernetes.client.models.V1Lifecycle

property liveness_probe (self)

Gets the liveness_probe of this V1alpha1UserContainer. # noqa: E501

Returns The liveness_probe of this V1alpha1UserContainer. # noqa: E501

Return type kubernetes.client.models.V1Probe

property mirror_volume_mounts (self)

Gets the mirror_volume_mounts of this V1alpha1UserContainer. # noqa: E501

MirrorVolumeMounts will mount the same volumes specified in the main container to the container (including artifacts), at the same mountPaths. This enables dind daemon to partially see the same filesystem as the main container in order to use features such as docker volume binding # noqa: E501

Returns The mirror_volume_mounts of this V1alpha1UserContainer. # noqa: E501

Return type bool

property name (self)

Gets the name of this V1alpha1UserContainer. # noqa: E501

Name of the container specified as a DNS_LABEL. Each container in a pod must have a unique name (DNS_LABEL). Cannot be updated. # noqa: E501

Returns The name of this V1alpha1UserContainer. # noqa: E501

Return type str

property ports (self)

Gets the ports of this V1alpha1UserContainer. # noqa: E501

List of ports to expose from the container. Exposing a port here gives the system additional information about the network connections a container uses, but is primarily informational. Not specifying a port here DOES NOT prevent that port from being exposed. Any port which is listening on the default “0.0.0.0” address inside a container will be accessible from the network. Cannot be updated. # noqa: E501

Returns The ports of this V1alpha1UserContainer. # noqa: E501

Return type list[kubernetes.client.models.V1ContainerPort]

property readiness_probe (self)

Gets the readiness_probe of this V1alpha1UserContainer. # noqa: E501

Returns The readiness_probe of this V1alpha1UserContainer. # noqa: E501

Return type kubernetes.client.models.V1Probe

property resources (self)

Gets the resources of this V1alpha1UserContainer. # noqa: E501

Returns The resources of this V1alpha1UserContainer. # noqa: E501

Return type kubernetes.client.models.V1ResourceRequirements

property security_context (self)

Gets the security_context of this V1alpha1UserContainer. # noqa: E501

Returns The security_context of this V1alpha1UserContainer. # noqa: E501

Return type kubernetes.client.models.V1SecurityContext

property stdin(self)

Gets the stdin of this V1alpha1UserContainer. # noqa: E501

Whether this container should allocate a buffer for stdin in the container runtime. If this is not set, reads from stdin in the container will always result in EOF. Default is false. # noqa: E501

Returns The stdin of this V1alpha1UserContainer. # noqa: E501

Return type bool

property stdin_once(self)

Gets the stdin_once of this V1alpha1UserContainer. # noqa: E501

Whether the container runtime should close the stdin channel after it has been opened by a single attach. When stdin is true the stdin stream will remain open across multiple attach sessions. If stdinOnce is set to true, stdin is opened on container start, is empty until the first client attaches to stdin, and then remains open and accepts data until the client disconnects, at which time stdin is closed and remains closed until the container is restarted. If this flag is false, a container processes that reads from stdin will never receive an EOF. Default is false # noqa: E501

Returns The stdin_once of this V1alpha1UserContainer. # noqa: E501

Return type bool

property termination_message_path(self)

Gets the termination_message_path of this V1alpha1UserContainer. # noqa: E501

Optional: Path at which the file to which the container’s termination message will be written is mounted into the container’s filesystem. Message written is intended to be brief final status, such as an assertion failure message. Will be truncated by the node if greater than 4096 bytes. The total message length across all containers will be limited to 12kb. Defaults to /dev/termination-log. Cannot be updated. # noqa: E501

Returns The termination_message_path of this V1alpha1UserContainer. # noqa: E501

Return type str

property termination_message_policy(self)

Gets the termination_message_policy of this V1alpha1UserContainer. # noqa: E501

Indicate how the termination message should be populated. File will use the contents of terminationMessagePath to populate the container status message on both success and failure. FallbackToLogsOnError will use the last chunk of container log output if the termination message file is empty and the container exited with an error. The log output is limited to 2048 bytes or 80 lines, whichever is smaller. Defaults to File. Cannot be updated. # noqa: E501

Returns The termination_message_policy of this V1alpha1UserContainer. # noqa: E501

Return type str

property tty(self)

Gets the tty of this V1alpha1UserContainer. # noqa: E501

Whether this container should allocate a TTY for itself, also requires ‘stdin’ to be true. Default is false. # noqa: E501

Returns The tty of this V1alpha1UserContainer. # noqa: E501

Return type bool

property volume_devices(self)

Gets the volume_devices of this V1alpha1UserContainer. # noqa: E501

volumeDevices is the list of block devices to be used by the container. This is a beta feature. # noqa: E501

Returns The volume_devices of this V1alpha1UserContainer. # noqa: E501

Return type list[kubernetes.client.models.V1VolumeDevice]

property volume_mounts (self)
Gets the volume_mounts of this V1alpha1UserContainer. # noqa: E501
Pod volumes to mount into the container's filesystem. Cannot be updated. # noqa: E501

Returns The volume_mounts of this V1alpha1UserContainer. # noqa: E501

Return type list[kubernetes.client.models.V1VolumeMount]

property working_dir (self)
Gets the working_dir of this V1alpha1UserContainer. # noqa: E501
Container's working directory. If not specified, the container runtime's default will be used, which might be configured in the container image. Cannot be updated. # noqa: E501

Returns The working_dir of this V1alpha1UserContainer. # noqa: E501

Return type str

to_dict (self)
Returns the model properties as a dict

to_str (self)
Returns the string representation of the model

V1alpha1ValueFrom - a model defined in OpenAPI

openapi_types

attribute_map

property jq_filter (self)

Gets the jq_filter of this V1alpha1ValueFrom. # noqa: E501

JQFilter expression against the resource object in resource templates # noqa: E501

Returns The jq_filter of this V1alpha1ValueFrom. # noqa: E501

Return type str

property json_path(self)
Gets the json_path of this V1alpha1ValueFrom. # noqa: E501
JSONPath of a resource to retrieve an output parameter value from in resource templates # noqa: E501
Returns The json_path of this V1alpha1ValueFrom. # noqa: E501
Return type str

property parameter(self)
Gets the parameter of this V1alpha1ValueFrom. # noqa: E501
Parameter reference to a step or dag task in which to retrieve an output parameter value from (e.g. '{steps.mystep.outputs.myparam}') # noqa: E501
Returns The parameter of this V1alpha1ValueFrom. # noqa: E501
Return type str

property path(self)
Gets the path of this V1alpha1ValueFrom. # noqa: E501
Path in the container to retrieve an output parameter value from in container templates # noqa: E501
Returns The path of this V1alpha1ValueFrom. # noqa: E501
Return type str

to_dict(self)
Returns the model properties as a dict

to_str(self)
Returns the string representation of the model

V1alpha1WorkflowSpec - a model defined in OpenAPI

openapi_types

attribute_map

property active_deadline_seconds (self)

Gets the active_deadline_seconds of this V1alpha1WorkflowSpec. # noqa: E501

Optional duration in seconds relative to the workflow start time which the workflow is allowed to run before the controller terminates the workflow. A value of zero is used to terminate a Running workflow # noqa: E501

Returns The active_deadline_seconds of this V1alpha1WorkflowSpec. # noqa: E501

Return type int

property affinity(*self*)

Gets the affinity of this V1alpha1WorkflowSpec. # noqa: E501

Returns The affinity of this V1alpha1WorkflowSpec. # noqa: E501

Return type kubernetes.client.models.V1Affinity

property arguments(*self*)

Gets the arguments of this V1alpha1WorkflowSpec. # noqa: E501

Returns The arguments of this V1alpha1WorkflowSpec. # noqa: E501

Return type [V1alpha1Arguments](#)

property artifact_repository_ref(*self*)

Gets the artifact_repository_ref of this V1alpha1WorkflowSpec. # noqa: E501

Returns The artifact_repository_ref of this V1alpha1WorkflowSpec. # noqa: E501

Return type [V1alpha1ArtifactRepositoryRef](#)

property automount_service_account_token(*self*)

Gets the automount_service_account_token of this V1alpha1WorkflowSpec. # noqa: E501

AutomountServiceAccountToken indicates whether a service account token should be automatically mounted in pods. ServiceAccountName of ExecutorConfig must be specified if this value is false. # noqa: E501

Returns The automount_service_account_token of this V1alpha1WorkflowSpec. # noqa: E501

Return type bool

property dns_config(*self*)

Gets the dns_config of this V1alpha1WorkflowSpec. # noqa: E501

Returns The dns_config of this V1alpha1WorkflowSpec. # noqa: E501

Return type kubernetes.client.models.V1PodDNSConfig

property dns_policy(*self*)

Gets the dns_policy of this V1alpha1WorkflowSpec. # noqa: E501

Set DNS policy for the pod. Defaults to ‘ClusterFirst’. Valid values are ‘ClusterFirstWithHostNet’, ‘ClusterFirst’, ‘Default’ or ‘None’. DNS parameters given in DNSConfig will be merged with the policy selected with DNSPolicy. To have DNS options set along with hostNetwork, you have to specify DNS policy explicitly to ‘ClusterFirstWithHostNet’. # noqa: E501

Returns The dns_policy of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property entrypoint(*self*)

Gets the entrypoint of this V1alpha1WorkflowSpec. # noqa: E501

Entrypoint is a template reference to the starting point of the workflow # noqa: E501

Returns The entrypoint of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property executor (self)

Gets the executor of this V1alpha1WorkflowSpec. # noqa: E501

Returns The executor of this V1alpha1WorkflowSpec. # noqa: E501

Return type [V1alpha1ExecutorConfig](#)

property host_aliases (self)

Gets the host_aliases of this V1alpha1WorkflowSpec. # noqa: E501

HostAliases is an optional list of hosts and IPs that will be injected into the pod spec # noqa: E501

Returns The host_aliases of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[kubernetes.client.models.V1HostAlias]

property host_network (self)

Gets the host_network of this V1alpha1WorkflowSpec. # noqa: E501

Host networking requested for this workflow pod. Default to false. # noqa: E501

Returns The host_network of this V1alpha1WorkflowSpec. # noqa: E501

Return type bool

property image_pull_secrets (self)

Gets the image_pull_secrets of this V1alpha1WorkflowSpec. # noqa: E501

ImagePullSecrets is a list of references to secrets in the same namespace to use for pulling any images in pods that reference this ServiceAccount. ImagePullSecrets are distinct from Secrets because Secrets can be mounted in the pod, but ImagePullSecrets are only accessed by the kubelet. More info: <https://kubernetes.io/docs/concepts/containers/images/#specifying-imagepullsecrets-on-a-pod> # noqa: E501

Returns The image_pull_secrets of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[kubernetes.client.models.V1LocalObjectReference]

property node_selector (self)

Gets the node_selector of this V1alpha1WorkflowSpec. # noqa: E501

NodeSelector is a selector which will result in all pods of the workflow to be scheduled on the selected node(s). This is able to be overridden by a nodeSelector specified in the template. # noqa: E501

Returns The node_selector of this V1alpha1WorkflowSpec. # noqa: E501

Return type dict(str, str)

property on_exit (self)

Gets the on_exit of this V1alpha1WorkflowSpec. # noqa: E501

OnExit is a template reference which is invoked at the end of the workflow, irrespective of the success, failure, or error of the primary workflow. # noqa: E501

Returns The on_exit of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property parallelism (self)

Gets the parallelism of this V1alpha1WorkflowSpec. # noqa: E501

Parallelism limits the max total parallel pods that can execute at the same time in a workflow # noqa: E501

Returns The parallelism of this V1alpha1WorkflowSpec. # noqa: E501

Return type int

property pod_gc(self)

Gets the pod_gc of this V1alpha1WorkflowSpec. # noqa: E501

Returns The pod_gc of this V1alpha1WorkflowSpec. # noqa: E501

Return type [V1alpha1PodGC](#)

property pod_priority(self)

Gets the pod_priority of this V1alpha1WorkflowSpec. # noqa: E501

Priority to apply to workflow pods. # noqa: E501

Returns The pod_priority of this V1alpha1WorkflowSpec. # noqa: E501

Return type int

property pod_priority_class_name(self)

Gets the pod_priority_class_name of this V1alpha1WorkflowSpec. # noqa: E501

PriorityClassName to apply to workflow pods. # noqa: E501

Returns The pod_priority_class_name of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property pod_spec_patch(self)

Gets the pod_spec_patch of this V1alpha1WorkflowSpec. # noqa: E501

PodSpecPatch holds strategic merge patch to apply against the pod spec. Allows parameterization of container fields which are not strings (e.g. resource limits). # noqa: E501

Returns The pod_spec_patch of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property priority(self)

Gets the priority of this V1alpha1WorkflowSpec. # noqa: E501

Priority is used if controller is configured to process limited number of workflows in parallel. Workflows with higher priority are processed first. # noqa: E501

Returns The priority of this V1alpha1WorkflowSpec. # noqa: E501

Return type int

property scheduler_name(self)

Gets the scheduler_name of this V1alpha1WorkflowSpec. # noqa: E501

Set scheduler name for all pods. Will be overridden if container/script template's scheduler name is set. Default scheduler will be used if neither specified. # noqa: E501

Returns The scheduler_name of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property security_context(self)

Gets the security_context of this V1alpha1WorkflowSpec. # noqa: E501

Returns The security_context of this V1alpha1WorkflowSpec. # noqa: E501

Return type kubernetes.client.models.V1PodSecurityContext

property service_account_name(self)

Gets the service_account_name of this V1alpha1WorkflowSpec. # noqa: E501

ServiceAccountName is the name of the ServiceAccount to run all pods of the workflow as. # noqa: E501

Returns The service_account_name of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property suspend(*self*)
Gets the suspend of this V1alpha1WorkflowSpec. # noqa: E501
Suspend will suspend the workflow and prevent execution of any future steps in the workflow # noqa: E501
Returns The suspend of this V1alpha1WorkflowSpec. # noqa: E501

Return type bool

property templates(*self*)
Gets the templates of this V1alpha1WorkflowSpec. # noqa: E501
Templates is a list of workflow templates used in a workflow # noqa: E501
Returns The templates of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[V1alpha1Template]

property tolerations(*self*)
Gets the tolerations of this V1alpha1WorkflowSpec. # noqa: E501
Tolerations to apply to workflow pods. # noqa: E501
Returns The tolerations of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[kubernetes.client.models.V1Toleration]

property ttl_seconds_after_finished(*self*)
Gets the ttl_seconds_after_finished of this V1alpha1WorkflowSpec. # noqa: E501
TTLSecondsAfterFinished limits the lifetime of a Workflow that has finished execution (Succeeded, Failed, Error). If this field is set, once the Workflow finishes, it will be deleted after ttlSecondsAfterFinished expires. If this field is unset, ttlSecondsAfterFinished will not expire. If this field is set to zero, ttlSecondsAfterFinished expires immediately after the Workflow finishes. # noqa: E501
Returns The ttl_seconds_after_finished of this V1alpha1WorkflowSpec. # noqa: E501

Return type int

property volume_claim_templates(*self*)
Gets the volume_claim_templates of this V1alpha1WorkflowSpec. # noqa: E501
VolumeClaimTemplates is a list of claims that containers are allowed to reference. The Workflow controller will create the claims at the beginning of the workflow and delete the claims upon completion of the workflow # noqa: E501
Returns The volume_claim_templates of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[kubernetes.client.models.V1PersistentVolumeClaim]

property volumes(*self*)
Gets the volumes of this V1alpha1WorkflowSpec. # noqa: E501
Volumes is a list of volumes that can be mounted by containers in a workflow. # noqa: E501
Returns The volumes of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[kubernetes.client.models.V1Volume]

to_dict(*self*)
Returns the model properties as a dict

to_str(*self*)
Returns the string representation of the model

`V1alpha1WorkflowStatus` - a model defined in OpenAPI

openapi_types

attribute_map

property compressed_nodes (self)

Gets the compressed_nodes of this `V1alpha1WorkflowStatus`. # noqa: E501

Compressed and base64 decoded Nodes map # noqa: E501

Returns The compressed_nodes of this `V1alpha1WorkflowStatus`. # noqa: E501

Return type str

property finished_at (self)

Gets the finished_at of this `V1alpha1WorkflowStatus`. # noqa: E501

Returns The finished_at of this `V1alpha1WorkflowStatus`. # noqa: E501

Return type IoK8sApimachineryPkgApisMetaV1Time

property message (self)

Gets the message of this `V1alpha1WorkflowStatus`. # noqa: E501

A human readable message indicating details about why the workflow is in this condition. # noqa: E501

Returns The message of this `V1alpha1WorkflowStatus`. # noqa: E501

Return type str

property nodes (self)

Gets the nodes of this V1alpha1WorkflowStatus. # noqa: E501

Nodes is a mapping between a node ID and the node's status. # noqa: E501

Returns The nodes of this V1alpha1WorkflowStatus. # noqa: E501

Return type dict(str, *V1alpha1NodeStatus*)

property outputs (self)

Gets the outputs of this V1alpha1WorkflowStatus. # noqa: E501

Returns The outputs of this V1alpha1WorkflowStatus. # noqa: E501

Return type *V1alpha1Outputs*

property persistent_volume_claims (self)

Gets the persistent_volume_claims of this V1alpha1WorkflowStatus. # noqa: E501

PersistentVolumeClaims tracks all PVCs that were created as part of the workflow. The contents of this list are drained at the end of the workflow. # noqa: E501

Returns The persistent_volume_claims of this V1alpha1WorkflowStatus. # noqa: E501

Return type list[kubernetes.client.models.V1Volume]

property phase (self)

Gets the phase of this V1alpha1WorkflowStatus. # noqa: E501

Phase a simple, high-level summary of where the workflow is in its lifecycle. # noqa: E501

Returns The phase of this V1alpha1WorkflowStatus. # noqa: E501

Return type str

property started_at (self)

Gets the started_at of this V1alpha1WorkflowStatus. # noqa: E501

Returns The started_at of this V1alpha1WorkflowStatus. # noqa: E501

Return type IoK8sApimachineryPkgApisMetaV1Time

property stored_templates (self)

Gets the stored_templates of this V1alpha1WorkflowStatus. # noqa: E501

StoredTemplates is a mapping between a template ref and the node's status. # noqa: E501

Returns The stored_templates of this V1alpha1WorkflowStatus. # noqa: E501

Return type dict(str, *V1alpha1Template*)

to_dict (self)

Returns the model properties as a dict

to_str (self)

Returns the string representation of the model

V1alpha1WorkflowStep - a model defined in OpenAPI

openapi_types

attribute_map

property arguments (self)

Gets the arguments of this V1alpha1WorkflowStep. # noqa: E501

Returns The arguments of this V1alpha1WorkflowStep. # noqa: E501

Return type [V1alpha1Arguments](#)

property continue_on (self)

Gets the continue_on of this V1alpha1WorkflowStep. # noqa: E501

Returns The continue_on of this V1alpha1WorkflowStep. # noqa: E501

Return type [V1alpha1ContinueOn](#)

property name (self)

Gets the name of this V1alpha1WorkflowStep. # noqa: E501

Name of the step # noqa: E501

Returns The name of this V1alpha1WorkflowStep. # noqa: E501

Return type str

property template (self)

Gets the template of this V1alpha1WorkflowStep. # noqa: E501

Template is the name of the template to execute as the step # noqa: E501

Returns The template of this V1alpha1WorkflowStep. # noqa: E501

Return type str

property template_ref(self)
Gets the template_ref of this V1alpha1WorkflowStep. # noqa: E501

Returns The template_ref of this V1alpha1WorkflowStep. # noqa: E501

Return type *V1alpha1TemplateRef*

property when(self)
Gets the when of this V1alpha1WorkflowStep. # noqa: E501

When is an expression in which the step should conditionally execute # noqa: E501

Returns The when of this V1alpha1WorkflowStep. # noqa: E501

Return type str

property with_items(self)
Gets the with_items of this V1alpha1WorkflowStep. # noqa: E501

WithItems expands a step into multiple parallel steps from the items in the list # noqa: E501

Returns The with_items of this V1alpha1WorkflowStep. # noqa: E501

Return type list[str]

property with_param(self)
Gets the with_param of this V1alpha1WorkflowStep. # noqa: E501

WithParam expands a step into multiple parallel steps from the value in the parameter, which is expected to be a JSON list. # noqa: E501

Returns The with_param of this V1alpha1WorkflowStep. # noqa: E501

Return type str

property with_sequence(self)
Gets the with_sequence of this V1alpha1WorkflowStep. # noqa: E501

Returns The with_sequence of this V1alpha1WorkflowStep. # noqa: E501

Return type *V1alpha1Sequence*

to_dict(self)
Returns the model properties as a dict

to_str(self)
Returns the string representation of the model

property archive (self)

Gets the archive of this V1alpha1Artifact. # noqa: E501

Returns The archive of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1ArchiveStrategy](#)

property archive_logs (self)

Gets the archive_logs of this V1alpha1Artifact. # noqa: E501

ArchiveLogs indicates if the container logs should be archived # noqa: E501

Returns The archive_logs of this V1alpha1Artifact. # noqa: E501

Return type bool

property artifactory (self)

Gets the artifactory of this V1alpha1Artifact. # noqa: E501

Returns The artifactory of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1ArtifactoryArtifact](#)

property git (self)

Gets the git of this V1alpha1Artifact. # noqa: E501

Returns The git of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1GitArtifact](#)

property global_name (self)

Gets the global_name of this V1alpha1Artifact. # noqa: E501

GlobalName exports an output artifact to the global scope, making it available as ‘{{workflow.outputs.artifacts.XXXX}}’ and in workflow.status.outputs.artifacts # noqa: E501

Returns The global_name of this V1alpha1Artifact. # noqa: E501

Return type str

property hdfs (self)

Gets the hdfs of this V1alpha1Artifact. # noqa: E501

Returns The hdfs of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1HDFSArtifact](#)

property http (self)

Gets the http of this V1alpha1Artifact. # noqa: E501

Returns The http of this V1alpha1Artifact. # noqa: E501

Return type [V1alpha1HTTPArtifact](#)

property mode (self)

Gets the mode of this V1alpha1Artifact. # noqa: E501

mode bits to use on this file, must be a value between 0 and 0777 set when loading input artifacts. # noqa: E501

Returns The mode of this V1alpha1Artifact. # noqa: E501

Return type int

property name (*self*)
 Gets the name of this V1alpha1Artifact. # noqa: E501
 name of the artifact. must be unique within a template's inputs/outputs. # noqa: E501

Returns The name of this V1alpha1Artifact. # noqa: E501

Return type str

property optional (*self*)
 Gets the optional of this V1alpha1Artifact. # noqa: E501
 Make Artifacts optional, if Artifacts doesn't generate or exist # noqa: E501

Returns The optional of this V1alpha1Artifact. # noqa: E501

Return type bool

property path (*self*)
 Gets the path of this V1alpha1Artifact. # noqa: E501
 Path is the container path to the artifact # noqa: E501

Returns The path of this V1alpha1Artifact. # noqa: E501

Return type str

property raw (*self*)
 Gets the raw of this V1alpha1Artifact. # noqa: E501

Returns The raw of this V1alpha1Artifact. # noqa: E501

Return type *V1alpha1RawArtifact*

property s3 (*self*)
 Gets the s3 of this V1alpha1Artifact. # noqa: E501

Returns The s3 of this V1alpha1Artifact. # noqa: E501

Return type *V1alpha1S3Artifact*

to_dict (*self*)
 Returns the model properties as a dict

to_str (*self*)
 Returns the string representation of the model

V1alpha1DAGTask - a model defined in OpenAPI

openapi_types

attribute_map

property arguments (self)

Gets the arguments of this V1alpha1DAGTask. # noqa: E501

Returns The arguments of this V1alpha1DAGTask. # noqa: E501

Return type [V1alpha1Arguments](#)

property continue_on (self)

Gets the continue_on of this V1alpha1DAGTask. # noqa: E501

Returns The continue_on of this V1alpha1DAGTask. # noqa: E501

Return type [V1alpha1ContinueOn](#)

property dependencies (self)

Gets the dependencies of this V1alpha1DAGTask. # noqa: E501

Dependencies are name of other targets which this depends on # noqa: E501

Returns The dependencies of this V1alpha1DAGTask. # noqa: E501

Return type list[str]

property name (self)

Gets the name of this V1alpha1DAGTask. # noqa: E501

Name is the name of the target # noqa: E501

Returns The name of this V1alpha1DAGTask. # noqa: E501

Return type str

property template (self)

Gets the template of this V1alpha1DAGTask. # noqa: E501

Name of template to execute # noqa: E501

Returns The template of this V1alpha1DAGTask. # noqa: E501

Return type str

property template_ref (self)

Gets the template_ref of this V1alpha1DAGTask. # noqa: E501

Returns The template_ref of this V1alpha1DAGTask. # noqa: E501

Return type [V1alpha1TemplateRef](#)

property when (self)

Gets the when of this V1alpha1DAGTask. # noqa: E501

When is an expression in which the task should conditionally execute # noqa: E501

Returns The when of this V1alpha1DAGTask. # noqa: E501

Return type str

property with_items (self)

Gets the with_items of this V1alpha1DAGTask. # noqa: E501

WithItems expands a task into multiple parallel tasks from the items in the list # noqa: E501

Returns The with_items of this V1alpha1DAGTask. # noqa: E501

Return type list[str]

property with_param(self)

Gets the with_param of this V1alpha1DAGTask. # noqa: E501

WithParam expands a task into multiple parallel tasks from the value in the parameter, which is expected to be a JSON list. # noqa: E501

Returns The with_param of this V1alpha1DAGTask. # noqa: E501

Return type str

property with_sequence(self)

Gets the with_sequence of this V1alpha1DAGTask. # noqa: E501

Returns The with_sequence of this V1alpha1DAGTask. # noqa: E501

Return type *V1alpha1Sequence*

to_dict(self)

Returns the model properties as a dict

to_str(self)

Returns the string representation of the model

class argo.models.**V1alpha1DAGTemplate**(fail_fast=None, target=None, tasks=None, local_vars_configuration=None)

Bases: object

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>

V1alpha1DAGTemplate - a model defined in OpenAPI

openapi_types

attribute_map

property fail_fast(self)

Gets the fail_fast of this V1alpha1DAGTemplate. # noqa: E501

This flag is for DAG logic. The DAG logic has a built-in “fail fast” feature to stop scheduling new steps, as soon as it detects that one of the DAG nodes is failed. Then it waits until all DAG nodes are completed before failing the DAG itself. The FailFast flag default is true, if set to false, it will allow a DAG to run all branches of the DAG to completion (either success or failure), regardless of the failed outcomes of branches in the DAG. More info and example about this feature at <https://github.com/argoproj/argo/issues/1442> # noqa: E501

Returns The fail_fast of this V1alpha1DAGTemplate. # noqa: E501

Return type bool

property target(self)

Gets the target of this V1alpha1DAGTemplate. # noqa: E501

Target are one or more names of targets to execute in a DAG # noqa: E501

Returns The target of this V1alpha1DAGTemplate. # noqa: E501

Return type str

property tasks(self)

Gets the tasks of this V1alpha1DAGTemplate. # noqa: E501

Tasks are a list of DAG tasks # noqa: E501

Returns The tasks of this V1alpha1DAGTemplate. # noqa: E501

Return type list[V1alpha1DAGTask]

to_dict(*self*)
Returns the model properties as a dict

to_str(*self*)
Returns the string representation of the model

class argo.models.V1alpha1ExecutorConfig(*service_account_name=None*,
cal_vars_configuration=None)
Bases: object

V1alpha1GitArtifact - a model defined in OpenAPI

openapi_types

attribute_map

property depth(*self*)
Gets the depth of this V1alpha1GitArtifact. # noqa: E501
Depth specifies clones/fetches should be shallow and include the given number of commits from the branch tip # noqa: E501

Returns The depth of this V1alpha1GitArtifact. # noqa: E501

Return type int

property fetch (self)
Gets the fetch of this V1alpha1GitArtifact. # noqa: E501
Fetch specifies a number of refs that should be fetched before checkout # noqa: E501
Returns The fetch of this V1alpha1GitArtifact. # noqa: E501

Return type list[str]

property insecure_ignore_host_key (self)
Gets the insecure_ignore_host_key of this V1alpha1GitArtifact. # noqa: E501
InsecureIgnoreHostKey disables SSH strict host key checking during git clone # noqa: E501
Returns The insecure_ignore_host_key of this V1alpha1GitArtifact. # noqa: E501

Return type bool

property password_secret (self)
Gets the password_secret of this V1alpha1GitArtifact. # noqa: E501
Returns The password_secret of this V1alpha1GitArtifact. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

property repo (self)
Gets the repo of this V1alpha1GitArtifact. # noqa: E501
Repo is the git repository # noqa: E501
Returns The repo of this V1alpha1GitArtifact. # noqa: E501

Return type str

property revision (self)
Gets the revision of this V1alpha1GitArtifact. # noqa: E501
Revision is the git commit, tag, branch to checkout # noqa: E501
Returns The revision of this V1alpha1GitArtifact. # noqa: E501

Return type str

property ssh_private_key_secret (self)
Gets the ssh_private_key_secret of this V1alpha1GitArtifact. # noqa: E501
Returns The ssh_private_key_secret of this V1alpha1GitArtifact. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

property username_secret (self)
Gets the username_secret of this V1alpha1GitArtifact. # noqa: E501
Returns The username_secret of this V1alpha1GitArtifact. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

to_dict (self)
Returns the model properties as a dict

to_str (self)
Returns the string representation of the model

```
class argo.models.V1alpha1HDFSArtifact (addresses=None, force=None,
                                         hdfs_user=None, krb_c_cache_secret=None,
                                         krb_config_config_map=None,
                                         krb_keytab_secret=None, krb_realm=None,
                                         krb_service_principal_name=None,
                                         krb_username=None, path=None, local_vars_configuration=None)

V1alpha1HDFSArtifact - a model defined in OpenAPI

openapi_types

attribute_map

property addresses (self)

Gets the addresses of this V1alpha1HDFSArtifact. # noqa: E501

Addresses is accessible addresses of HDFS name nodes # noqa: E501

Returns The addresses of this V1alpha1HDFSArtifact. # noqa: E501

Return type list[str]

property force (self)

Gets the force of this V1alpha1HDFSArtifact. # noqa: E501

Force copies a file forcibly even if it exists (default: false) # noqa: E501

Returns The force of this V1alpha1HDFSArtifact. # noqa: E501

Return type bool

property hdfs_user (self)

Gets the hdfs_user of this V1alpha1HDFSArtifact. # noqa: E501

HDFSUser is the user to access HDFS file system. It is ignored if either ccache or keytab is used. # noqa: E501

Returns The hdfs_user of this V1alpha1HDFSArtifact. # noqa: E501

Return type str

property krb_c_cache_secret (self)

Gets the krb_c_cache_secret of this V1alpha1HDFSArtifact. # noqa: E501

Returns The krb_c_cache_secret of this V1alpha1HDFSArtifact. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

property krb_config_config_map (self)

Gets the krb_config_config_map of this V1alpha1HDFSArtifact. # noqa: E501

Returns The krb_config_config_map of this V1alpha1HDFSArtifact. # noqa: E501

Return type kubernetes.client.models.V1ConfigMapKeySelector

property krb_keytab_secret (self)

Gets the krb_keytab_secret of this V1alpha1HDFSArtifact. # noqa: E501

Returns The krb_keytab_secret of this V1alpha1HDFSArtifact. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

```
property krb_realm(self)
    Gets the krb_realm of this V1alpha1HDFSArtifact. # noqa: E501
    KrbRealm is the Kerberos realm used with Kerberos keytab It must be set if keytab is used. # noqa: E501
        Returns The krb_realm of this V1alpha1HDFSArtifact. # noqa: E501
        Return type str

property krb_service_principal_name(self)
    Gets the krb_service_principal_name of this V1alpha1HDFSArtifact. # noqa: E501
    KrbServicePrincipalName is the principal name of Kerberos service It must be set if either ccache or
keytab is used. # noqa: E501
        Returns The krb_service_principal_name of this V1alpha1HDFSArtifact. # noqa: E501
        Return type str

property krb_username(self)
    Gets the krb_username of this V1alpha1HDFSArtifact. # noqa: E501
    KrbUsername is the Kerberos username used with Kerberos keytab It must be set if keytab is used. # noqa:
E501
        Returns The krb_username of this V1alpha1HDFSArtifact. # noqa: E501
        Return type str

property path(self)
    Gets the path of this V1alpha1HDFSArtifact. # noqa: E501
    Path is a file path in HDFS # noqa: E501
        Returns The path of this V1alpha1HDFSArtifact. # noqa: E501
        Return type str

to_dict(self)
    Returns the model properties as a dict

to_str(self)
    Returns the string representation of the model

class argo.models.V1alpha1HDFSCConfig(addresses=None,                                     hdfs_user=None,

V1alpha1NodeStatus - a model defined in OpenAPI

openapi_types**attribute_map****property boundary_id**(*self*)

Gets the boundary_id of this V1alpha1NodeStatus. # noqa: E501

BoundaryID indicates the node ID of the associated template root node in which this node belongs to # noqa: E501

Returns The boundary_id of this V1alpha1NodeStatus. # noqa: E501

Return type str

property children(*self*)
Gets the children of this V1alpha1NodeStatus. # noqa: E501
Children is a list of child node IDs # noqa: E501

Returns The children of this V1alpha1NodeStatus. # noqa: E501

Return type list[str]

property daemoned(*self*)
Gets the daemoned of this V1alpha1NodeStatus. # noqa: E501
Daemoned tracks whether or not this node was daemoned and need to be terminated # noqa: E501

Returns The daemoned of this V1alpha1NodeStatus. # noqa: E501

Return type bool

property display_name(*self*)
Gets the display_name of this V1alpha1NodeStatus. # noqa: E501
DisplayName is a human readable representation of the node. Unique within a template boundary # noqa: E501

Returns The display_name of this V1alpha1NodeStatus. # noqa: E501

Return type str

property finished_at(*self*)
Gets the finished_at of this V1alpha1NodeStatus. # noqa: E501

Returns The finished_at of this V1alpha1NodeStatus. # noqa: E501

Return type IoK8sApimachineryPkgApisMetaV1Time

property id(*self*)
Gets the id of this V1alpha1NodeStatus. # noqa: E501
ID is a unique identifier of a node within the workflow It is implemented as a hash of the node name, which makes the ID deterministic # noqa: E501

Returns The id of this V1alpha1NodeStatus. # noqa: E501

Return type str

property inputs(*self*)
Gets the inputs of this V1alpha1NodeStatus. # noqa: E501

Returns The inputs of this V1alpha1NodeStatus. # noqa: E501

Return type *V1alpha1Inputs*

property message(*self*)
Gets the message of this V1alpha1NodeStatus. # noqa: E501
A human readable message indicating details about why the node is in this condition. # noqa: E501

Returns The message of this V1alpha1NodeStatus. # noqa: E501

Return type str

property name(*self*)
Gets the name of this V1alpha1NodeStatus. # noqa: E501

Name is unique name in the node tree used to generate the node ID # noqa: E501

Returns The name of this V1alpha1NodeStatus. # noqa: E501

Return type str

property outbound_nodes (self)

Gets the outbound_nodes of this V1alpha1NodeStatus. # noqa: E501

OutboundNodes tracks the node IDs which are considered “outbound” nodes to a template invocation. For every invocation of a template, there are nodes which we considered as “outbound”. Essentially, these are last nodes in the execution sequence to run, before the template is considered completed. These nodes are then connected as parents to a following step. In the case of single pod steps (i.e. container, script, resource templates), this list will be nil since the pod itself is already considered the “outbound” node. In the case of DAGs, outbound nodes are the “target” tasks (tasks with no children). In the case of steps, outbound nodes are all the containers involved in the last step group. NOTE: since templates are composable, the list of outbound nodes are carried upwards when a DAG/steps template invokes another DAG/steps template. In other words, the outbound nodes of a template, will be a superset of the outbound nodes of its last children. # noqa: E501

Returns The outbound_nodes of this V1alpha1NodeStatus. # noqa: E501

Return type list[str]

property outputs (self)

Gets the outputs of this V1alpha1NodeStatus. # noqa: E501

Returns The outputs of this V1alpha1NodeStatus. # noqa: E501

Return type [V1alpha1Outputs](#)

property phase (self)

Gets the phase of this V1alpha1NodeStatus. # noqa: E501

Phase a simple, high-level summary of where the node is in its lifecycle. Can be used as a state machine. # noqa: E501

Returns The phase of this V1alpha1NodeStatus. # noqa: E501

Return type str

property pod_ip (self)

Gets the pod_ip of this V1alpha1NodeStatus. # noqa: E501

PodIP captures the IP of the pod for daemonized steps # noqa: E501

Returns The pod_ip of this V1alpha1NodeStatus. # noqa: E501

Return type str

property started_at (self)

Gets the started_at of this V1alpha1NodeStatus. # noqa: E501

Returns The started_at of this V1alpha1NodeStatus. # noqa: E501

Return type [IoK8sApimachineryPkgApisMetaV1Time](#)

property stored_template_id (self)

Gets the stored_template_id of this V1alpha1NodeStatus. # noqa: E501

StoredTemplateID is the ID of stored template. DEPRECATED: This value is not used anymore. # noqa: E501

Returns The stored_template_id of this V1alpha1NodeStatus. # noqa: E501

Return type str

```

property template_name (self)
    Gets the template_name of this V1alpha1NodeStatus. # noqa: E501
    TemplateName is the template name which this node corresponds to. Not applicable to virtual nodes (e.g. Retry, StepGroup) # noqa: E501
        Returns The template_name of this V1alpha1NodeStatus. # noqa: E501
        Return type str

property template_ref (self)
    Gets the template_ref of this V1alpha1NodeStatus. # noqa: E501
        Returns The template_ref of this V1alpha1NodeStatus. # noqa: E501
        Return type V1alpha1TemplateRef

property template_scope (self)
    Gets the template_scope of this V1alpha1NodeStatus. # noqa: E501
    TemplateScope is the template scope in which the template of this node was retrieved. # noqa: E501
        Returns The template_scope of this V1alpha1NodeStatus. # noqa: E501
        Return type str

property type (self)
    Gets the type of this V1alpha1NodeStatus. # noqa: E501
    Type indicates type of node # noqa: E501
        Returns The type of this V1alpha1NodeStatus. # noqa: E501
        Return type str

property workflow_template_name (self)
    Gets the workflow_template_name of this V1alpha1NodeStatus. # noqa: E501
    WorkflowTemplateName is the WorkflowTemplate resource name on which the resolved template of this node is retrieved. DEPRECATED: This value is not used anymore. # noqa: E501
        Returns The workflow_template_name of this V1alpha1NodeStatus. # noqa: E501
        Return type str

to_dict (self)
    Returns the model properties as a dict

to_str (self)
    Returns the string representation of the model

class argo.models.V1alpha1Outputs (artifacts=None, parameters=None, result=None, local_vars_configuration=None)
Bases: object

V1alpha1Outputs - a model defined in OpenAPI

openapi_types
attribute_map

```

```
property artifacts(self)
    Gets the artifacts of this V1alpha1Outputs. # noqa: E501
    Artifacts holds the list of output artifacts produced by a step # noqa: E501
    Returns The artifacts of this V1alpha1Outputs. # noqa: E501
    Return type list[V1alpha1Artifact]

property parameters(self)
    Gets the parameters of this V1alpha1Outputs. # noqa: E501
    Parameters holds the list of output parameters produced by a step # noqa: E501
    Returns The parameters of this V1alpha1Outputs. # noqa: E501
    Return type list[V1alpha1Parameter]

property result(self)
    Gets the result of this V1alpha1Outputs. # noqa: E501
    Result holds the result (stdout) of a script template # noqa: E501
    Returns The result of this V1alpha1Outputs. # noqa: E501
    Return type str

to_dict(self)
    Returns the model properties as a dict

to_str(self)
    Returns the string representation of the model

class argo.models.V1alpha1Parameter(default=None,      global_name=None,      name=None,
                                         value=None,          value_from=None,         local_vars_configuration=None)

V1alpha1Parameter - a model defined in OpenAPI

openapi_types

attribute_map

property default(self)
    Gets the default of this V1alpha1Parameter. # noqa: E501
    Default is the default value to use for an input parameter if a value was not supplied # noqa: E501
    Returns The default of this V1alpha1Parameter. # noqa: E501
    Return type str

property global_name(self)
    Gets the global_name of this V1alpha1Parameter. # noqa: E501
    GlobalName exports an output parameter to the global scope, making it available as '{{workflow.outputs.parameters.XXXX}} and in workflow.status.outputs.parameters # noqa: E501
    Returns The global_name of this V1alpha1Parameter. # noqa: E501
    Return type str
```

property name (*self*)
 Gets the name of this V1alpha1Parameter. # noqa: E501
 Name is the parameter name # noqa: E501

Returns The name of this V1alpha1Parameter. # noqa: E501

Return type str

property value (*self*)
 Gets the value of this V1alpha1Parameter. # noqa: E501
 Value is the literal value to use for the parameter. If specified in the context of an input parameter, the value takes precedence over any passed values # noqa: E501

Returns The value of this V1alpha1Parameter. # noqa: E501

Return type str

property value_from (*self*)
 Gets the value_from of this V1alpha1Parameter. # noqa: E501

Returns The value_from of this V1alpha1Parameter. # noqa: E501

Return type *V1alpha1ValueFrom*

to_dict (*self*)
 Returns the model properties as a dict

to_str (*self*)
 Returns the string representation of the model

class argo.models.V1alpha1PodGC (*strategy=None, local_vars_configuration=None*)

V1alpha1ResourceTemplate - a model defined in OpenAPI

openapi_types
attribute_map
property action(self)
    Gets the action of this V1alpha1ResourceTemplate. # noqa: E501
    Action is the action to perform to the resource. Must be one of: get, create, apply, delete, replace, patch # noqa: E501
    Returns The action of this V1alpha1ResourceTemplate. # noqa: E501
    Return type str

property failure_condition(self)
    Gets the failure_condition of this V1alpha1ResourceTemplate. # noqa: E501
    FailureCondition is a label selector expression which describes the conditions of the k8s resource in which the step was considered failed # noqa: E501
    Returns The failure_condition of this V1alpha1ResourceTemplate. # noqa: E501
    Return type str

property manifest(self)
    Gets the manifest of this V1alpha1ResourceTemplate. # noqa: E501
    Manifest contains the kubernetes manifest # noqa: E501
    Returns The manifest of this V1alpha1ResourceTemplate. # noqa: E501
    Return type str

property merge_strategy(self)
    Gets the merge_strategy of this V1alpha1ResourceTemplate. # noqa: E501
```

MergeStrategy is the strategy used to merge a patch. It defaults to “strategic” Must be one of: strategic, merge, json # noqa: E501

Returns The merge_strategy of this V1alpha1ResourceTemplate. # noqa: E501

Return type str

property set_owner_reference(self)

Gets the set_owner_reference of this V1alpha1ResourceTemplate. # noqa: E501

SetOwnerReference sets the reference to the workflow on the OwnerReference of generated resource. # noqa: E501

Returns The set_owner_reference of this V1alpha1ResourceTemplate. # noqa: E501

Return type bool

property success_condition(self)

Gets the success_condition of this V1alpha1ResourceTemplate. # noqa: E501

SuccessCondition is a label selector expression which describes the conditions of the k8s resource in which it is acceptable to proceed to the following step # noqa: E501

Returns The success_condition of this V1alpha1ResourceTemplate. # noqa: E501

Return type str

to_dict(self)

Returns the model properties as a dict

to_str(self)

Returns the string representation of the model

class argo.models.V1alpha1RetryStrategy (*limit=None, local_vars_configuration=None*)

Bases: object

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>

V1alpha1RetryStrategy - a model defined in OpenAPI

openapi_types

attribute_map

property limit(self)

Gets the limit of this V1alpha1RetryStrategy. # noqa: E501

Limit is the maximum number of attempts when retrying a container # noqa: E501

Returns The limit of this V1alpha1RetryStrategy. # noqa: E501

Return type int

to_dict(self)

Returns the model properties as a dict

to_str(self)

Returns the string representation of the model

class argo.models.V1alpha1S3Artifact (*access_key_secret=None, bucket=None, endpoint=None, insecure=None, key=None, region=None, role_arn=None, secret_key_secret=None, local_vars_configuration=None*)

V1alpha1S3Artifact - a model defined in OpenAPI

openapi_types

attribute_map

property access_key_secret (self)

Gets the access_key_secret of this V1alpha1S3Artifact. # noqa: E501

Returns The access_key_secret of this V1alpha1S3Artifact. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

property bucket (self)

Gets the bucket of this V1alpha1S3Artifact. # noqa: E501

Bucket is the name of the bucket # noqa: E501

Returns The bucket of this V1alpha1S3Artifact. # noqa: E501

Return type str

property endpoint (self)

Gets the endpoint of this V1alpha1S3Artifact. # noqa: E501

Endpoint is the hostname of the bucket endpoint # noqa: E501

Returns The endpoint of this V1alpha1S3Artifact. # noqa: E501

Return type str

property insecure (self)

Gets the insecure of this V1alpha1S3Artifact. # noqa: E501

Insecure will connect to the service with TLS # noqa: E501

Returns The insecure of this V1alpha1S3Artifact. # noqa: E501

Return type bool

property key (self)

Gets the key of this V1alpha1S3Artifact. # noqa: E501

Key is the key in the bucket where the artifact resides # noqa: E501

Returns The key of this V1alpha1S3Artifact. # noqa: E501

Return type str

property region (self)

Gets the region of this V1alpha1S3Artifact. # noqa: E501

Region contains the optional bucket region # noqa: E501

Returns The region of this V1alpha1S3Artifact. # noqa: E501

Return type str

property role_arn (self)

Gets the role_arn of this V1alpha1S3Artifact. # noqa: E501

RoleARN is the Amazon Resource Name (ARN) of the role to assume. # noqa: E501

Returns The role_arn of this V1alpha1S3Artifact. # noqa: E501

Return type str

property secret_key_secret (self)
Gets the secret_key_secret of this V1alpha1S3Artifact. # noqa: E501

Returns The secret_key_secret of this V1alpha1S3Artifact. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

to_dict (self)
Returns the model properties as a dict

to_str (self)
Returns the string representation of the model

class argo.models.V1alpha1S3Bucket (*access_key_secret=None, bucket=None, endpoint=None, insecure=None, region=None, role_arn=None, secret_key_secret=None, local_vars_configuration=None*)

V1alpha1S3Bucket - a model defined in OpenAPI

openapi_types

attribute_map

property access_key_secret (self)
Gets the access_key_secret of this V1alpha1S3Bucket. # noqa: E501

Returns The access_key_secret of this V1alpha1S3Bucket. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

property bucket (self)
Gets the bucket of this V1alpha1S3Bucket. # noqa: E501

Bucket is the name of the bucket # noqa: E501

Returns The bucket of this V1alpha1S3Bucket. # noqa: E501

Return type str

property endpoint (self)
Gets the endpoint of this V1alpha1S3Bucket. # noqa: E501

Endpoint is the hostname of the bucket endpoint # noqa: E501

Returns The endpoint of this V1alpha1S3Bucket. # noqa: E501

Return type str

property insecure (self)
Gets the insecure of this V1alpha1S3Bucket. # noqa: E501

Insecure will connect to the service with TLS # noqa: E501

Returns The insecure of this V1alpha1S3Bucket. # noqa: E501

Return type bool

property region (self)
Gets the region of this V1alpha1S3Bucket. # noqa: E501

Region contains the optional bucket region # noqa: E501

Returns The region of this V1alpha1S3Bucket. # noqa: E501

Return type str

property role_arn (self)

Gets the role_arn of this V1alpha1S3Bucket. # noqa: E501

RoleARN is the Amazon Resource Name (ARN) of the role to assume. # noqa: E501

Returns The role_arn of this V1alpha1S3Bucket. # noqa: E501

Return type str

property secret_key_secret (self)

Gets the secret_key_secret of this V1alpha1S3Bucket. # noqa: E501

Returns The secret_key_secret of this V1alpha1S3Bucket. # noqa: E501

Return type kubernetes.client.models.V1SecretKeySelector

to_dict (self)

Returns the model properties as a dict

to_str (self)

Returns the string representation of the model

```
class argo.models.V1alpha1ScriptTemplate(args=None, command=None, env=None,

V1alpha1ScriptTemplate - a model defined in OpenAPI

openapi_types

attribute_map

property args (self)

Gets the args of this V1alpha1ScriptTemplate. # noqa: E501

Arguments to the entrypoint. The docker image's CMD is used if this is not provided. Variable references \${VAR_NAME} are expanded using the container's environment. If a variable cannot be resolved, the reference in the input string will be unchanged. The \${VAR_NAME} syntax can be escaped with a double \$\$, ie: \$\$(\${VAR_NAME}). Escaped references will never be expanded, regardless of whether the variable exists or not. Cannot be updated. More info: <https://kubernetes.io/docs/tasks/inject-data-application/define-command-argument-container/#running-a-command-in-a-shell> # noqa: E501

Returns The args of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[str]

property command(self)

Gets the command of this V1alpha1ScriptTemplate. # noqa: E501

Entrypoint array. Not executed within a shell. The docker image's ENTRYPOINT is used if this is not provided. Variable references \${VAR_NAME} are expanded using the container's environment. If a variable cannot be resolved, the reference in the input string will be unchanged. The \${VAR_NAME} syntax can be escaped with a double \$\$, ie: \$\$(VAR_NAME). Escaped references will never be expanded, regardless of whether the variable exists or not. Cannot be updated. More info: <https://kubernetes.io/docs/tasks/inject-data-application/define-command-argument-container/#running-a-command-in-a-shell> # noqa: E501

Returns The command of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[str]

property env(self)

Gets the env of this V1alpha1ScriptTemplate. # noqa: E501

List of environment variables to set in the container. Cannot be updated. # noqa: E501

Returns The env of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[kubernetes.client.models.V1EnvVar]

property env_from(self)

Gets the env_from of this V1alpha1ScriptTemplate. # noqa: E501

List of sources to populate environment variables in the container. The keys defined within a source must be a C_IDENTIFIER. All invalid keys will be reported as an event when the container is starting. When a key exists in multiple sources, the value associated with the last source will take precedence. Values defined by an Env with a duplicate key will take precedence. Cannot be updated. # noqa: E501

Returns The env_from of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[kubernetes.client.models.V1EnvFromSource]

property image(self)

Gets the image of this V1alpha1ScriptTemplate. # noqa: E501

Docker image name. More info: <https://kubernetes.io/docs/concepts/containers/images> This field is optional to allow higher level config management to default or override container images in workload controllers like Deployments and StatefulSets. # noqa: E501

Returns The image of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property image_pull_policy(self)

Gets the image_pull_policy of this V1alpha1ScriptTemplate. # noqa: E501

Image pull policy. One of Always, Never, IfNotPresent. Defaults to Always if :latest tag is specified, or IfNotPresent otherwise. Cannot be updated. More info: <https://kubernetes.io/docs/concepts/containers/images#updating-images> # noqa: E501

Returns The image_pull_policy of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property lifecycle(self)

Gets the lifecycle of this V1alpha1ScriptTemplate. # noqa: E501

Returns The lifecycle of this V1alpha1ScriptTemplate. # noqa: E501

Return type kubernetes.client.models.V1Lifecycle

property liveness_probe (self)

Gets the liveness_probe of this V1alpha1ScriptTemplate. # noqa: E501

Returns The liveness_probe of this V1alpha1ScriptTemplate. # noqa: E501

Return type kubernetes.client.models.V1Probe

property name (self)

Gets the name of this V1alpha1ScriptTemplate. # noqa: E501

Name of the container specified as a DNS_LABEL. Each container in a pod must have a unique name (DNS_LABEL). Cannot be updated. # noqa: E501

Returns The name of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property ports (self)

Gets the ports of this V1alpha1ScriptTemplate. # noqa: E501

List of ports to expose from the container. Exposing a port here gives the system additional information about the network connections a container uses, but is primarily informational. Not specifying a port here DOES NOT prevent that port from being exposed. Any port which is listening on the default “0.0.0.0” address inside a container will be accessible from the network. Cannot be updated. # noqa: E501

Returns The ports of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[kubernetes.client.models.V1ContainerPort]

property readiness_probe (self)

Gets the readiness_probe of this V1alpha1ScriptTemplate. # noqa: E501

Returns The readiness_probe of this V1alpha1ScriptTemplate. # noqa: E501

Return type kubernetes.client.models.V1Probe

property resources (self)

Gets the resources of this V1alpha1ScriptTemplate. # noqa: E501

Returns The resources of this V1alpha1ScriptTemplate. # noqa: E501

Return type kubernetes.client.models.V1ResourceRequirements

property security_context (self)

Gets the security_context of this V1alpha1ScriptTemplate. # noqa: E501

Returns The security_context of this V1alpha1ScriptTemplate. # noqa: E501

Return type kubernetes.client.models.V1SecurityContext

property source (self)

Gets the source of this V1alpha1ScriptTemplate. # noqa: E501

Source contains the source code of the script to execute # noqa: E501

Returns The source of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property stdin (self)

Gets the stdin of this V1alpha1ScriptTemplate. # noqa: E501

Whether this container should allocate a buffer for stdin in the container runtime. If this is not set, reads from stdin in the container will always result in EOF. Default is false. # noqa: E501

Returns The stdin of this V1alpha1ScriptTemplate. # noqa: E501

Return type bool

property `stdin_once`(*self*)

Gets the stdin_once of this V1alpha1ScriptTemplate. # noqa: E501

Whether the container runtime should close the stdin channel after it has been opened by a single attach. When stdin is true the stdin stream will remain open across multiple attach sessions. If stdinOnce is set to true, stdin is opened on container start, is empty until the first client attaches to stdin, and then remains open and accepts data until the client disconnects, at which time stdin is closed and remains closed until the container is restarted. If this flag is false, a container processes that reads from stdin will never receive an EOF. Default is false # noqa: E501

Returns The stdin_once of this V1alpha1ScriptTemplate. # noqa: E501

Return type bool

property `termination_message_path`(*self*)

Gets the termination_message_path of this V1alpha1ScriptTemplate. # noqa: E501

Optional: Path at which the file to which the container’s termination message will be written is mounted into the container’s filesystem. Message written is intended to be brief final status, such as an assertion failure message. Will be truncated by the node if greater than 4096 bytes. The total message length across all containers will be limited to 12kb. Defaults to /dev/termination-log. Cannot be updated. # noqa: E501

Returns The termination_message_path of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property `termination_message_policy`(*self*)

Gets the termination_message_policy of this V1alpha1ScriptTemplate. # noqa: E501

Indicate how the termination message should be populated. File will use the contents of terminationMessagePath to populate the container status message on both success and failure. FallbackToLogsOnError will use the last chunk of container log output if the termination message file is empty and the container exited with an error. The log output is limited to 2048 bytes or 80 lines, whichever is smaller. Defaults to File. Cannot be updated. # noqa: E501

Returns The termination_message_policy of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

property `tty`(*self*)

Gets the tty of this V1alpha1ScriptTemplate. # noqa: E501

Whether this container should allocate a TTY for itself, also requires ‘stdin’ to be true. Default is false. # noqa: E501

Returns The tty of this V1alpha1ScriptTemplate. # noqa: E501

Return type bool

property `volume_devices`(*self*)

Gets the volume_devices of this V1alpha1ScriptTemplate. # noqa: E501

volumeDevices is the list of block devices to be used by the container. This is a beta feature. # noqa: E501

Returns The volume_devices of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[kubernetes.client.models.V1VolumeDevice]

property `volume_mounts`(*self*)

Gets the volume_mounts of this V1alpha1ScriptTemplate. # noqa: E501

Pod volumes to mount into the container’s filesystem. Cannot be updated. # noqa: E501

Returns The volume_mounts of this V1alpha1ScriptTemplate. # noqa: E501

Return type list[kubernetes.client.models.V1VolumeMount]

property working_dir (self)

Gets the working_dir of this V1alpha1ScriptTemplate. # noqa: E501

Container's working directory. If not specified, the container runtime's default will be used, which might be configured in the container image. Cannot be updated. # noqa: E501

Returns The working_dir of this V1alpha1ScriptTemplate. # noqa: E501

Return type str

to_dict (self)

Returns the model properties as a dict

to_str (self)

Returns the string representation of the model

class argo.models.V1alpha1Sequence (*count=None, end=None, format=None, start=None, local_vars_configuration=None*)

Bases: object

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>

V1alpha1Sequence - a model defined in OpenAPI

openapi_types

attribute_map

property count (self)

Gets the count of this V1alpha1Sequence. # noqa: E501

Count is number of elements in the sequence (default: 0). Not to be used with end # noqa: E501

Returns The count of this V1alpha1Sequence. # noqa: E501

Return type str

property end (self)

Gets the end of this V1alpha1Sequence. # noqa: E501

Number at which to end the sequence (default: 0). Not to be used with Count # noqa: E501

Returns The end of this V1alpha1Sequence. # noqa: E501

Return type str

property format (self)

Gets the format of this V1alpha1Sequence. # noqa: E501

Format is a printf format string to format the value in the sequence # noqa: E501

Returns The format of this V1alpha1Sequence. # noqa: E501

Return type str

property start (self)

Gets the start of this V1alpha1Sequence. # noqa: E501

Number at which to start the sequence (default: 0) # noqa: E501

Returns The start of this V1alpha1Sequence. # noqa: E501

Return type str

to_dict (self)

Returns the model properties as a dict

to_str (self)

Returns the string representation of the model

```
class argo.models.V1alpha1SuspendTemplate (duration=None, cal_vars_configuration=None)
```

Bases: object

V1alpha1SuspendTemplate - a model defined in OpenAPI

openapi_types**attribute_map****property duration (self)**

Gets the duration of this V1alpha1SuspendTemplate. # noqa: E501

Duration is the seconds to wait before automatically resuming a template # noqa: E501

Returns The duration of this V1alpha1SuspendTemplate. # noqa: E501

Return type int

to_dict (self)

Returns the model properties as a dict

to_str (self)

Returns the string representation of the model

```
class argo.models.V1alpha1Template (active_deadline_seconds=None, affinity=None, archive_location=None, arguments=None, auto-  
mount_service_account_token=None, container=None, daemon=None, dag=None, executor=None, host_aliases=None, init_containers=None, inputs=None,  
metadata=None, name=None, node_selector=None, outputs=None, parallelism=None, pod_spec_patch=None, priority=None, priority_class_name=None, re-

V1alpha1Template - a model defined in OpenAPI

openapi_types**attribute_map****property active_deadline_seconds (self)**

Gets the active_deadline_seconds of this V1alpha1Template. # noqa: E501

Optional duration in seconds relative to the StartTime that the pod may be active on a node before the system actively tries to terminate the pod; value must be positive integer This field is only applicable to container and script templates. # noqa: E501

Returns The active_deadline_seconds of this V1alpha1Template. # noqa: E501

Return type int

property affinity(*self*)

Gets the affinity of this V1alpha1Template. # noqa: E501

Returns The affinity of this V1alpha1Template. # noqa: E501

Return type kubernetes.client.models.V1Affinity

property archive_location(*self*)

Gets the archive_location of this V1alpha1Template. # noqa: E501

Returns The archive_location of this V1alpha1Template. # noqa: E501

Return type *V1alpha1ArtifactLocation*

property arguments(*self*)

Gets the arguments of this V1alpha1Template. # noqa: E501

Returns The arguments of this V1alpha1Template. # noqa: E501

Return type *V1alpha1Arguments*

property automount_service_account_token(*self*)

Gets the automount_service_account_token of this V1alpha1Template. # noqa: E501

AutomountServiceAccountToken indicates whether a service account token should be automatically mounted in pods. ServiceAccountName of ExecutorConfig must be specified if this value is false. # noqa: E501

Returns The automount_service_account_token of this V1alpha1Template. # noqa: E501

Return type bool

property container(*self*)

Gets the container of this V1alpha1Template. # noqa: E501

Returns The container of this V1alpha1Template. # noqa: E501

Return type kubernetes.client.models.V1Container

property daemon(*self*)

Gets the daemon of this V1alpha1Template. # noqa: E501

Deamon will allow a workflow to proceed to the next step so long as the container reaches readiness # noqa: E501

Returns The daemon of this V1alpha1Template. # noqa: E501

Return type bool

property dag(*self*)

Gets the dag of this V1alpha1Template. # noqa: E501

Returns The dag of this V1alpha1Template. # noqa: E501

Return type *V1alpha1DAGTemplate*

property executor(*self*)

Gets the executor of this V1alpha1Template. # noqa: E501

Returns The executor of this V1alpha1Template. # noqa: E501

Return type [V1alpha1ExecutorConfig](#)

property host_aliases (self)
 Gets the host_aliases of this V1alpha1Template. # noqa: E501
 HostAliases is an optional list of hosts and IPs that will be injected into the pod spec # noqa: E501

Returns The host_aliases of this V1alpha1Template. # noqa: E501

Return type list[kubernetes.client.models.V1HostAlias]

property init_containers (self)
 Gets the init_containers of this V1alpha1Template. # noqa: E501
 InitContainers is a list of containers which run before the main container. # noqa: E501

Returns The init_containers of this V1alpha1Template. # noqa: E501

Return type list[V1alpha1UserContainer]

property inputs (self)
 Gets the inputs of this V1alpha1Template. # noqa: E501

Returns The inputs of this V1alpha1Template. # noqa: E501

Return type [V1alpha1Inputs](#)

property metadata (self)
 Gets the metadata of this V1alpha1Template. # noqa: E501

Returns The metadata of this V1alpha1Template. # noqa: E501

Return type [V1alpha1Metadata](#)

property name (self)
 Gets the name of this V1alpha1Template. # noqa: E501
 Name is the name of the template # noqa: E501

Returns The name of this V1alpha1Template. # noqa: E501

Return type str

property node_selector (self)
 Gets the node_selector of this V1alpha1Template. # noqa: E501
 NodeSelector is a selector to schedule this step of the workflow to be run on the selected node(s). Overrides the selector set at the workflow level. # noqa: E501

Returns The node_selector of this V1alpha1Template. # noqa: E501

Return type dict(str, str)

property outputs (self)
 Gets the outputs of this V1alpha1Template. # noqa: E501

Returns The outputs of this V1alpha1Template. # noqa: E501

Return type [V1alpha1Outputs](#)

property parallelism (self)
 Gets the parallelism of this V1alpha1Template. # noqa: E501
 Parallelism limits the max total parallel pods that can execute at the same time within the boundaries of this template invocation. If additional steps/dag templates are invoked, the pods created by those templates will not be counted towards this total. # noqa: E501

Returns The parallelism of this V1alpha1Template. # noqa: E501

Return type int

property `pod_spec_patch(self)`

Gets the pod_spec_patch of this V1alpha1Template. # noqa: E501

PodSpecPatch holds strategic merge patch to apply against the pod spec. Allows parameterization of container fields which are not strings (e.g. resource limits). # noqa: E501

Returns The pod_spec_patch of this V1alpha1Template. # noqa: E501

Return type str

property `priority(self)`

Gets the priority of this V1alpha1Template. # noqa: E501

Priority to apply to workflow pods. # noqa: E501

Returns The priority of this V1alpha1Template. # noqa: E501

Return type int

property `priority_class_name(self)`

Gets the priority_class_name of this V1alpha1Template. # noqa: E501

PriorityClassName to apply to workflow pods. # noqa: E501

Returns The priority_class_name of this V1alpha1Template. # noqa: E501

Return type str

property `resource(self)`

Gets the resource of this V1alpha1Template. # noqa: E501

Returns The resource of this V1alpha1Template. # noqa: E501

Return type `V1alpha1ResourceTemplate`

property `retry_strategy(self)`

Gets the retry_strategy of this V1alpha1Template. # noqa: E501

Returns The retry_strategy of this V1alpha1Template. # noqa: E501

Return type `V1alpha1RetryStrategy`

property `scheduler_name(self)`

Gets the scheduler_name of this V1alpha1Template. # noqa: E501

If specified, the pod will be dispatched by specified scheduler. Or it will be dispatched by workflow scope scheduler if specified. If neither specified, the pod will be dispatched by default scheduler. # noqa: E501

Returns The scheduler_name of this V1alpha1Template. # noqa: E501

Return type str

property `script(self)`

Gets the script of this V1alpha1Template. # noqa: E501

Returns The script of this V1alpha1Template. # noqa: E501

Return type `V1alpha1ScriptTemplate`

property `security_context(self)`

Gets the security_context of this V1alpha1Template. # noqa: E501

Returns The security_context of this V1alpha1Template. # noqa: E501

Return type kubernetes.client.models.V1PodSecurityContext

property service_account_name (self)
 Gets the service_account_name of this V1alpha1Template. # noqa: E501
 ServiceAccountName to apply to workflow pods # noqa: E501
Returns The service_account_name of this V1alpha1Template. # noqa: E501

Return type str

property sidecars (self)
 Gets the sidecars of this V1alpha1Template. # noqa: E501
 Sidecars is a list of containers which run alongside the main container Sidecars are automatically killed when the main container completes # noqa: E501
Returns The sidecars of this V1alpha1Template. # noqa: E501

Return type list[V1alpha1UserContainer]

property steps (self)
 Gets the steps of this V1alpha1Template. # noqa: E501
 Steps define a series of sequential/parallel workflow steps # noqa: E501
Returns The steps of this V1alpha1Template. # noqa: E501

Return type list[list[V1alpha1WorkflowStep]]

property suspend (self)
 Gets the suspend of this V1alpha1Template. # noqa: E501
Returns The suspend of this V1alpha1Template. # noqa: E501
Return type V1alpha1SuspendTemplate

property template (self)
 Gets the template of this V1alpha1Template. # noqa: E501
 Template is the name of the template which is used as the base of this template. # noqa: E501
Returns The template of this V1alpha1Template. # noqa: E501
Return type str

property template_ref (self)
 Gets the template_ref of this V1alpha1Template. # noqa: E501
Returns The template_ref of this V1alpha1Template. # noqa: E501
Return type V1alpha1TemplateRef

property tolerations (self)
 Gets the tolerations of this V1alpha1Template. # noqa: E501
 Tolerations to apply to workflow pods. # noqa: E501
Returns The tolerations of this V1alpha1Template. # noqa: E501
Return type list[kubernetes.client.models.V1Toleration]

property volumes (self)
 Gets the volumes of this V1alpha1Template. # noqa: E501
 Volumes is a list of volumes that can be mounted by containers in a template. # noqa: E501
Returns The volumes of this V1alpha1Template. # noqa: E501

Return type list[kubernetes.client.models.V1Volume]

to_dict (*self*)
Returns the model properties as a dict

to_str (*self*)
Returns the string representation of the model

class argo.models.V1alpha1TemplateRef(*name=None, runtime_resolution=None, template=None, local_vars_configuration=None*)
Bases: object

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>

V1alpha1TemplateRef - a model defined in OpenAPI

openapi_types

attribute_map

property name (*self*)
Gets the name of this V1alpha1TemplateRef. # noqa: E501
Name is the resource name of the template. # noqa: E501
Returns The name of this V1alpha1TemplateRef. # noqa: E501

Return type str

property runtime_resolution (*self*)
Gets the runtime_resolution of this V1alpha1TemplateRef. # noqa: E501
RuntimeResolution skips validation at creation time. By enabling this option, you can create the referred workflow template before the actual runtime. # noqa: E501
Returns The runtime_resolution of this V1alpha1TemplateRef. # noqa: E501

Return type bool

property template (*self*)
Gets the template of this V1alpha1TemplateRef. # noqa: E501
Template is the name of referred template in the resource. # noqa: E501
Returns The template of this V1alpha1TemplateRef. # noqa: E501

Return type str

to_dict (*self*)
Returns the model properties as a dict

to_str (*self*)
Returns the string representation of the model

```
class argo.models.V1alpha1UserContainer(args=None,      command=None,      env=None,

V1alpha1UserContainer - a model defined in OpenAPI

openapi_types

attribute_map

property args (self)

Gets the args of this V1alpha1UserContainer. # noqa: E501

Arguments to the entrypoint. The docker image's CMD is used if this is not provided. Variable references \${VAR_NAME} are expanded using the container's environment. If a variable cannot be resolved, the reference in the input string will be unchanged. The \${VAR_NAME} syntax can be escaped with a double \$\$, ie: \$\$(VAR_NAME). Escaped references will never be expanded, regardless of whether the variable exists or not. Cannot be updated. More info: <https://kubernetes.io/docs/tasks/inject-data-application/define-command-argument-container/#running-a-command-in-a-shell> # noqa: E501

Returns The args of this V1alpha1UserContainer. # noqa: E501

Return type list[str]

property command (self)

Gets the command of this V1alpha1UserContainer. # noqa: E501

Entrypoint array. Not executed within a shell. The docker image's ENTRYPOINT is used if this is not provided. Variable references \${VAR_NAME} are expanded using the container's environment. If a variable cannot be resolved, the reference in the input string will be unchanged. The \${VAR_NAME} syntax can be escaped with a double \$\$, ie: \$\$(VAR_NAME). Escaped references will never be expanded, regardless of whether the variable exists or not. Cannot be updated. More info: <https://kubernetes.io/docs/tasks/inject-data-application/define-command-argument-container/#running-a-command-in-a-shell> # noqa: E501

Returns The command of this V1alpha1UserContainer. # noqa: E501

Return type list[str]

property env (self)

Gets the env of this V1alpha1UserContainer. # noqa: E501

List of environment variables to set in the container. Cannot be updated. # noqa: E501

Returns The env of this V1alpha1UserContainer. # noqa: E501

Return type list[kubernetes.client.models.V1EnvVar]

property env_from (self)

Gets the env_from of this V1alpha1UserContainer. # noqa: E501

List of sources to populate environment variables in the container. The keys defined within a source must be a C_IDENTIFIER. All invalid keys will be reported as an event when the container is starting. When a key exists in multiple sources, the value associated with the last source will take precedence. Values defined by an Env with a duplicate key will take precedence. Cannot be updated. # noqa: E501

Returns The env_from of this V1alpha1UserContainer. # noqa: E501

Return type list[kubernetes.client.models.V1EnvFromSource]

property image (self)

Gets the image of this V1alpha1UserContainer. # noqa: E501

Docker image name. More info: <https://kubernetes.io/docs/concepts/containers/images> This field is optional to allow higher level config management to default or override container images in workload controllers like Deployments and StatefulSets. # noqa: E501

Returns The image of this V1alpha1UserContainer. # noqa: E501

Return type str

property image_pull_policy (self)

Gets the image_pull_policy of this V1alpha1UserContainer. # noqa: E501

Image pull policy. One of Always, Never, IfNotPresent. Defaults to Always if :latest tag is specified, or IfNotPresent otherwise. Cannot be updated. More info: <https://kubernetes.io/docs/concepts/containers/images#updating-images> # noqa: E501

Returns The image_pull_policy of this V1alpha1UserContainer. # noqa: E501

Return type str

property lifecycle (self)

Gets the lifecycle of this V1alpha1UserContainer. # noqa: E501

Returns The lifecycle of this V1alpha1UserContainer. # noqa: E501

Return type kubernetes.client.models.V1Lifecycle

property liveness_probe (self)

Gets the liveness_probe of this V1alpha1UserContainer. # noqa: E501

Returns The liveness_probe of this V1alpha1UserContainer. # noqa: E501

Return type kubernetes.client.models.V1Probe

property mirror_volume_mounts (self)

Gets the mirror_volume_mounts of this V1alpha1UserContainer. # noqa: E501

MirrorVolumeMounts will mount the same volumes specified in the main container to the container (including artifacts), at the same mountPaths. This enables dind daemon to partially see the same filesystem as the main container in order to use features such as docker volume binding # noqa: E501

Returns The mirror_volume_mounts of this V1alpha1UserContainer. # noqa: E501

Return type bool

property name (self)

Gets the name of this V1alpha1UserContainer. # noqa: E501

Name of the container specified as a DNS_LABEL. Each container in a pod must have a unique name (DNS_LABEL). Cannot be updated. # noqa: E501

Returns The name of this V1alpha1UserContainer. # noqa: E501

Return type str

property ports (self)

Gets the ports of this V1alpha1UserContainer. # noqa: E501

List of ports to expose from the container. Exposing a port here gives the system additional information about the network connections a container uses, but is primarily informational. Not specifying a port here DOES NOT prevent that port from being exposed. Any port which is listening on the default “0.0.0.0” address inside a container will be accessible from the network. Cannot be updated. # noqa: E501

Returns The ports of this V1alpha1UserContainer. # noqa: E501

Return type list[kubernetes.client.models.V1ContainerPort]

property readiness_probe (self)

Gets the readiness_probe of this V1alpha1UserContainer. # noqa: E501

Returns The readiness_probe of this V1alpha1UserContainer. # noqa: E501

Return type kubernetes.client.models.V1Probe

property resources (self)

Gets the resources of this V1alpha1UserContainer. # noqa: E501

Returns The resources of this V1alpha1UserContainer. # noqa: E501

Return type kubernetes.client.models.V1ResourceRequirements

property security_context (self)

Gets the security_context of this V1alpha1UserContainer. # noqa: E501

Returns The security_context of this V1alpha1UserContainer. # noqa: E501

Return type kubernetes.client.models.V1SecurityContext

property stdin (self)

Gets the stdin of this V1alpha1UserContainer. # noqa: E501

Whether this container should allocate a buffer for stdin in the container runtime. If this is not set, reads from stdin in the container will always result in EOF. Default is false. # noqa: E501

Returns The stdin of this V1alpha1UserContainer. # noqa: E501

Return type bool

property stdin_once (self)

Gets the stdin_once of this V1alpha1UserContainer. # noqa: E501

Whether the container runtime should close the stdin channel after it has been opened by a single attach. When stdin is true the stdin stream will remain open across multiple attach sessions. If stdinOnce is set to true, stdin is opened on container start, is empty until the first client attaches to stdin, and then remains open and accepts data until the client disconnects, at which time stdin is closed and remains closed until the container is restarted. If this flag is false, a container processes that reads from stdin will never receive an EOF. Default is false # noqa: E501

Returns The stdin_once of this V1alpha1UserContainer. # noqa: E501

Return type bool

property termination_message_path (self)

Gets the termination_message_path of this V1alpha1UserContainer. # noqa: E501

Optional: Path at which the file to which the container’s termination message will be written is mounted into the container’s filesystem. Message written is intended to be brief final status, such as an assertion failure message. Will be truncated by the node if greater than 4096 bytes. The total message length across all containers will be limited to 12kb. Defaults to /dev/termination-log. Cannot be updated. # noqa: E501

Returns The termination_message_path of this V1alpha1UserContainer. # noqa: E501

Return type str

property termination_message_policy (self)

Gets the termination_message_policy of this V1alpha1UserContainer. # noqa: E501

Indicate how the termination message should be populated. File will use the contents of terminationMessagePath to populate the container status message on both success and failure. FallbackToLogsOnError will use the last chunk of container log output if the termination message file is empty and the container exited with an error. The log output is limited to 2048 bytes or 80 lines, whichever is smaller. Defaults to File. Cannot be updated. # noqa: E501

Returns The termination_message_policy of this V1alpha1UserContainer. # noqa: E501

Return type str

property tty (self)

Gets the tty of this V1alpha1UserContainer. # noqa: E501

Whether this container should allocate a TTY for itself, also requires ‘stdin’ to be true. Default is false. # noqa: E501

Returns The tty of this V1alpha1UserContainer. # noqa: E501

Return type bool

property volume_devices (self)

Gets the volume_devices of this V1alpha1UserContainer. # noqa: E501

volumeDevices is the list of block devices to be used by the container. This is a beta feature. # noqa: E501

Returns The volume_devices of this V1alpha1UserContainer. # noqa: E501

Return type list[kubernetes.client.models.V1VolumeDevice]

property volume_mounts (self)

Gets the volume_mounts of this V1alpha1UserContainer. # noqa: E501

Pod volumes to mount into the container’s filesystem. Cannot be updated. # noqa: E501

Returns The volume_mounts of this V1alpha1UserContainer. # noqa: E501

Return type list[kubernetes.client.models.V1VolumeMount]

property working_dir (self)

Gets the working_dir of this V1alpha1UserContainer. # noqa: E501

Container’s working directory. If not specified, the container runtime’s default will be used, which might be configured in the container image. Cannot be updated. # noqa: E501

Returns The working_dir of this V1alpha1UserContainer. # noqa: E501

Return type str

to_dict (self)

Returns the model properties as a dict

to_str (self)

Returns the string representation of the model

class argo.models.V1alpha1ValueFrom(jq_filter=None, json_path=None, parameter=None, path=None, local_vars_configuration=None)

Bases: object

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>

V1alpha1ValueFrom - a model defined in OpenAPI

openapi_types

attribute_map

property jq_filter(self)

Gets the jq_filter of this V1alpha1ValueFrom. # noqa: E501

JQFilter expression against the resource object in resource templates # noqa: E501

Returns The jq_filter of this V1alpha1ValueFrom. # noqa: E501

Return type str

property json_path(self)

Gets the json_path of this V1alpha1ValueFrom. # noqa: E501

JSONPath of a resource to retrieve an output parameter value from in resource templates # noqa: E501

Returns The json_path of this V1alpha1ValueFrom. # noqa: E501

Return type str

property parameter(self)

Gets the parameter of this V1alpha1ValueFrom. # noqa: E501

Parameter reference to a step or dag task in which to retrieve an output parameter value from (e.g. '{steps.mystep.outputs.myparam}') # noqa: E501

Returns The parameter of this V1alpha1ValueFrom. # noqa: E501

Return type str

property path(self)

Gets the path of this V1alpha1ValueFrom. # noqa: E501

Path in the container to retrieve an output parameter value from in container templates # noqa: E501

Returns The path of this V1alpha1ValueFrom. # noqa: E501

Return type str

to_dict(self)

Returns the model properties as a dict

to_str(self)

Returns the string representation of the model

```
class argo.models.V1alpha1Workflow(api_version=None, kind=None, meta-
                                    data=None, spec=None, status=None, lo-
                                    cal_vars_configuration=None)
```

Bases: object

V1alpha1Workflow - a model defined in OpenAPI

openapi_types

attribute_map

```
property api_version(self)
    Gets the api_version of this V1alpha1Workflow. # noqa: E501

    APIVersion defines the versioned schema of this representation of an object. Servers should convert recognized schemas to the latest internal value, and may reject unrecognized values. More info: https://git.k8s.io/community/contributors/devel/api-conventions.md#resources # noqa: E501

    Returns The api_version of this V1alpha1Workflow. # noqa: E501

    Return type str

property kind(self)
    Gets the kind of this V1alpha1Workflow. # noqa: E501

    Kind is a string value representing the REST resource this object represents. Servers may infer this from the endpoint the client submits requests to. Cannot be updated. In CamelCase. More info: https://git.k8s.io/community/contributors/devel/api-conventions.md#types-kinds # noqa: E501

    Returns The kind of this V1alpha1Workflow. # noqa: E501

    Return type str

property metadata(self)
    Gets the metadata of this V1alpha1Workflow. # noqa: E501

    Returns The metadata of this V1alpha1Workflow. # noqa: E501

    Return type IoK8sApimachineryPkgApisMetaV1ObjectMeta

property spec(self)
    Gets the spec of this V1alpha1Workflow. # noqa: E501

    Returns The spec of this V1alpha1Workflow. # noqa: E501

    Return type V1alpha1WorkflowSpec

property status(self)
    Gets the status of this V1alpha1Workflow. # noqa: E501

    Returns The status of this V1alpha1Workflow. # noqa: E501

    Return type V1alpha1WorkflowStatus

to_dict(self)
    Returns the model properties as a dict

to_str(self)
    Returns the string representation of the model

class argo.models.V1alpha1WorkflowList(api_version=None, items=None, kind=None, metadata=None, local_vars_configuration=None)
    Bases: object

    V1alpha1WorkflowList - a model defined in OpenAPI

    openapi_types
    attribute_map

    property api_version(self)
        Gets the api_version of this V1alpha1WorkflowList. # noqa: E501
```

APIVersion defines the versioned schema of this representation of an object. Servers should convert recognized schemas to the latest internal value, and may reject unrecognized values. More info: <https://git.k8s.io/community/contributors/devel/api-conventions.md#resources> # noqa: E501

Returns The api_version of this V1alpha1WorkflowList. # noqa: E501

Return type str

property items (self)

Gets the items of this V1alpha1WorkflowList. # noqa: E501

Returns The items of this V1alpha1WorkflowList. # noqa: E501

Return type list[V1alpha1Workflow]

property kind (self)

Gets the kind of this V1alpha1WorkflowList. # noqa: E501

Kind is a string value representing the REST resource this object represents. Servers may infer this from the endpoint the client submits requests to. Cannot be updated. In CamelCase. More info: <https://git.k8s.io/community/contributors/devel/api-conventions.md#types-kinds> # noqa: E501

Returns The kind of this V1alpha1WorkflowList. # noqa: E501

Return type str

property metadata (self)

Gets the metadata of this V1alpha1WorkflowList. # noqa: E501

Returns The metadata of this V1alpha1WorkflowList. # noqa: E501

Return type IoK8sApimachineryPkgApisMetaV1ListMeta

to_dict (self)

Returns the model properties as a dict

to_str (self)

Returns the string representation of the model

```
class argo.models.V1alpha1WorkflowSpec(active_deadline_seconds=None, affinity=None, arguments=None, artifact_repository_ref=None, automount_service_account_token=None, dns_config=None, dns_policy=None, entry_point=None, executor=None, host_aliases=None, host_network=None, image_pull_secrets=None, node_selector=None, on_exit=None, parallelism=None, pod_gc=None, pod_priority=None, pod_priority_class_name=None, pod_spec_patch=None, priority=None, scheduler_name=None, security_context=None, service_account_name=None, suspend=None, templates=None, tolerations=None, ttl_seconds_after_finished=None, volume_claim_templates=None, volumes=None, local_vars_configuration=None)
```

Bases: object

NOTE: This class is auto generated by OpenAPI Generator. Ref: <https://openapi-generator.tech>

V1alpha1WorkflowSpec - a model defined in OpenAPI

openapi_types

attribute_map**property active_deadline_seconds (self)**

Gets the active_deadline_seconds of this V1alpha1WorkflowSpec. # noqa: E501

Optional duration in seconds relative to the workflow start time which the workflow is allowed to run before the controller terminates the workflow. A value of zero is used to terminate a Running workflow # noqa: E501

Returns The active_deadline_seconds of this V1alpha1WorkflowSpec. # noqa: E501

Return type int

property affinity (self)

Gets the affinity of this V1alpha1WorkflowSpec. # noqa: E501

Returns The affinity of this V1alpha1WorkflowSpec. # noqa: E501

Return type kubernetes.client.models.V1Affinity

property arguments (self)

Gets the arguments of this V1alpha1WorkflowSpec. # noqa: E501

Returns The arguments of this V1alpha1WorkflowSpec. # noqa: E501

Return type [V1alpha1Arguments](#)

property artifact_repository_ref (self)

Gets the artifact_repository_ref of this V1alpha1WorkflowSpec. # noqa: E501

Returns The artifact_repository_ref of this V1alpha1WorkflowSpec. # noqa: E501

Return type [V1alpha1ArtifactRepositoryRef](#)

property automount_service_account_token (self)

Gets the automount_service_account_token of this V1alpha1WorkflowSpec. # noqa: E501

AutomountServiceAccountToken indicates whether a service account token should be automatically mounted in pods. ServiceAccountName of ExecutorConfig must be specified if this value is false. # noqa: E501

Returns The automount_service_account_token of this V1alpha1WorkflowSpec. # noqa: E501

Return type bool

property dns_config (self)

Gets the dns_config of this V1alpha1WorkflowSpec. # noqa: E501

Returns The dns_config of this V1alpha1WorkflowSpec. # noqa: E501

Return type kubernetes.client.models.V1PodDNSConfig

property dns_policy (self)

Gets the dns_policy of this V1alpha1WorkflowSpec. # noqa: E501

Set DNS policy for the pod. Defaults to “ClusterFirst”. Valid values are ‘ClusterFirstWithHostNet’, ‘ClusterFirst’, ‘Default’ or ‘None’. DNS parameters given in DNSConfig will be merged with the policy selected with DNSPolicy. To have DNS options set along with hostNetwork, you have to specify DNS policy explicitly to ‘ClusterFirstWithHostNet’. # noqa: E501

Returns The dns_policy of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property `entrypoint` (*self*)
Gets the entrypoint of this V1alpha1WorkflowSpec. # noqa: E501
Entrypoint is a template reference to the starting point of the workflow # noqa: E501

Returns The entrypoint of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property `executor` (*self*)
Gets the executor of this V1alpha1WorkflowSpec. # noqa: E501

Returns The executor of this V1alpha1WorkflowSpec. # noqa: E501

Return type [V1alpha1ExecutorConfig](#)

property `host_aliases` (*self*)
Gets the host_aliases of this V1alpha1WorkflowSpec. # noqa: E501
HostAliases is an optional list of hosts and IPs that will be injected into the pod spec # noqa: E501

Returns The host_aliases of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[kubernetes.client.models.V1HostAlias]

property `host_network` (*self*)
Gets the host_network of this V1alpha1WorkflowSpec. # noqa: E501
Host networking requested for this workflow pod. Default to false. # noqa: E501

Returns The host_network of this V1alpha1WorkflowSpec. # noqa: E501

Return type bool

property `image_pull_secrets` (*self*)
Gets the image_pull_secrets of this V1alpha1WorkflowSpec. # noqa: E501
ImagePullSecrets is a list of references to secrets in the same namespace to use for pulling any images in pods that reference this ServiceAccount. ImagePullSecrets are distinct from Secrets because Secrets can be mounted in the pod, but ImagePullSecrets are only accessed by the kubelet. More info: <https://kubernetes.io/docs/concepts/containers/images/#specifying-imagepullsecrets-on-a-pod> # noqa: E501

Returns The image_pull_secrets of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[kubernetes.client.models.V1LocalObjectReference]

property `node_selector` (*self*)
Gets the node_selector of this V1alpha1WorkflowSpec. # noqa: E501
NodeSelector is a selector which will result in all pods of the workflow to be scheduled on the selected node(s). This is able to be overridden by a nodeSelector specified in the template. # noqa: E501

Returns The node_selector of this V1alpha1WorkflowSpec. # noqa: E501

Return type dict(str, str)

property `on_exit` (*self*)
Gets the on_exit of this V1alpha1WorkflowSpec. # noqa: E501
OnExit is a template reference which is invoked at the end of the workflow, irrespective of the success, failure, or error of the primary workflow. # noqa: E501

Returns The on_exit of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property parallelism(self)
Gets the parallelism of this V1alpha1WorkflowSpec. # noqa: E501
Parallelism limits the max total parallel pods that can execute at the same time in a workflow # noqa: E501

Returns The parallelism of this V1alpha1WorkflowSpec. # noqa: E501

Return type int

property pod_gc(self)
Gets the pod_gc of this V1alpha1WorkflowSpec. # noqa: E501

Returns The pod_gc of this V1alpha1WorkflowSpec. # noqa: E501

Return type [V1alpha1PodGC](#)

property pod_priority(self)
Gets the pod_priority of this V1alpha1WorkflowSpec. # noqa: E501
Priority to apply to workflow pods. # noqa: E501

Returns The pod_priority of this V1alpha1WorkflowSpec. # noqa: E501

Return type int

property pod_priority_class_name(self)
Gets the pod_priority_class_name of this V1alpha1WorkflowSpec. # noqa: E501
PriorityClassName to apply to workflow pods. # noqa: E501

Returns The pod_priority_class_name of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property pod_spec_patch(self)
Gets the pod_spec_patch of this V1alpha1WorkflowSpec. # noqa: E501
PodSpecPatch holds strategic merge patch to apply against the pod spec. Allows parameterization of container fields which are not strings (e.g. resource limits). # noqa: E501

Returns The pod_spec_patch of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property priority(self)
Gets the priority of this V1alpha1WorkflowSpec. # noqa: E501
Priority is used if controller is configured to process limited number of workflows in parallel. Workflows with higher priority are processed first. # noqa: E501

Returns The priority of this V1alpha1WorkflowSpec. # noqa: E501

Return type int

property scheduler_name(self)
Gets the scheduler_name of this V1alpha1WorkflowSpec. # noqa: E501
Set scheduler name for all pods. Will be overridden if container/script template's scheduler name is set. Default scheduler will be used if neither specified. # noqa: E501

Returns The scheduler_name of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property security_context(self)
Gets the security_context of this V1alpha1WorkflowSpec. # noqa: E501

Returns The security_context of this V1alpha1WorkflowSpec. # noqa: E501

Return type kubernetes.client.models.V1PodSecurityContext

property service_account_name (self)
 Gets the service_account_name of this V1alpha1WorkflowSpec. # noqa: E501
 ServiceAccountName is the name of the ServiceAccount to run all pods of the workflow as. # noqa: E501
Returns The service_account_name of this V1alpha1WorkflowSpec. # noqa: E501

Return type str

property suspend (self)
 Gets the suspend of this V1alpha1WorkflowSpec. # noqa: E501
 Suspend will suspend the workflow and prevent execution of any future steps in the workflow # noqa: E501
Returns The suspend of this V1alpha1WorkflowSpec. # noqa: E501

Return type bool

property templates (self)
 Gets the templates of this V1alpha1WorkflowSpec. # noqa: E501
 Templates is a list of workflow templates used in a workflow # noqa: E501
Returns The templates of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[V1alpha1Template]

property tolerations (self)
 Gets the tolerations of this V1alpha1WorkflowSpec. # noqa: E501
 Tolerations to apply to workflow pods. # noqa: E501
Returns The tolerations of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[kubernetes.client.models.V1Toleration]

property ttl_seconds_after_finished (self)
 Gets the ttl_seconds_after_finished of this V1alpha1WorkflowSpec. # noqa: E501
 TTLSecondsAfterFinished limits the lifetime of a Workflow that has finished execution (Succeeded, Failed, Error). If this field is set, once the Workflow finishes, it will be deleted after ttlSecondsAfterFinished expires. If this field is unset, ttlSecondsAfterFinished will not expire. If this field is set to zero, ttlSecondsAfterFinished expires immediately after the Workflow finishes. # noqa: E501
Returns The ttl_seconds_after_finished of this V1alpha1WorkflowSpec. # noqa: E501

Return type int

property volume_claim_templates (self)
 Gets the volume_claim_templates of this V1alpha1WorkflowSpec. # noqa: E501
 VolumeClaimTemplates is a list of claims that containers are allowed to reference. The Workflow controller will create the claims at the beginning of the workflow and delete the claims upon completion of the workflow # noqa: E501
Returns The volume_claim_templates of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[kubernetes.client.models.V1PersistentVolumeClaim]

property volumes (self)
 Gets the volumes of this V1alpha1WorkflowSpec. # noqa: E501
 Volumes is a list of volumes that can be mounted by containers in a workflow. # noqa: E501

Returns The volumes of this V1alpha1WorkflowSpec. # noqa: E501

Return type list[kubernetes.client.models.V1Volume]

to_dict (*self*)
Returns the model properties as a dict

to_str (*self*)
Returns the string representation of the model

class argo.models.V1alpha1WorkflowStatus (*compressed_nodes=None, finished_at=None, message=None, nodes=None, outputs=None, persistent_volume_claims=None, phase=None, started_at=None, stored_templates=None, local_vars_configuration=None*)

V1alpha1WorkflowStatus - a model defined in OpenAPI

openapi_types

attribute_map

property compressed_nodes (*self*)
Gets the compressed_nodes of this V1alpha1WorkflowStatus. # noqa: E501
Compressed and base64 decoded Nodes map # noqa: E501

Returns The compressed_nodes of this V1alpha1WorkflowStatus. # noqa: E501

Return type str

property finished_at (*self*)
Gets the finished_at of this V1alpha1WorkflowStatus. # noqa: E501

Returns The finished_at of this V1alpha1WorkflowStatus. # noqa: E501

Return type IoK8sApimachineryPkgApisMetaV1Time

property message (*self*)
Gets the message of this V1alpha1WorkflowStatus. # noqa: E501
A human readable message indicating details about why the workflow is in this condition. # noqa: E501

Returns The message of this V1alpha1WorkflowStatus. # noqa: E501

Return type str

property nodes (*self*)
Gets the nodes of this V1alpha1WorkflowStatus. # noqa: E501
Nodes is a mapping between a node ID and the node's status. # noqa: E501

Returns The nodes of this V1alpha1WorkflowStatus. # noqa: E501

Return type dict(str, *V1alpha1NodeStatus*)

property outputs (*self*)
Gets the outputs of this V1alpha1WorkflowStatus. # noqa: E501

Returns The outputs of this V1alpha1WorkflowStatus. # noqa: E501

Return type *V1alpha1Outputs*

property persistent_volume_claims (self)
 Gets the persistent_volume_claims of this V1alpha1WorkflowStatus. # noqa: E501

PersistentVolumeClaims tracks all PVCs that were created as part of the workflow. The contents of this list are drained at the end of the workflow. # noqa: E501

Returns The persistent_volume_claims of this V1alpha1WorkflowStatus. # noqa: E501

Return type list[kubernetes.client.models.V1Volume]

property phase (self)
 Gets the phase of this V1alpha1WorkflowStatus. # noqa: E501

Phase a simple, high-level summary of where the workflow is in its lifecycle. # noqa: E501

Returns The phase of this V1alpha1WorkflowStatus. # noqa: E501

Return type str

property started_at (self)
 Gets the started_at of this V1alpha1WorkflowStatus. # noqa: E501

Returns The started_at of this V1alpha1WorkflowStatus. # noqa: E501

Return type IoK8sApimachineryPkgApisMetaV1Time

property stored_templates (self)
 Gets the stored_templates of this V1alpha1WorkflowStatus. # noqa: E501

StoredTemplates is a mapping between a template ref and the node's status. # noqa: E501

Returns The stored_templates of this V1alpha1WorkflowStatus. # noqa: E501

Return type dict(str, *V1alpha1Template*)

to_dict (self)
 Returns the model properties as a dict

to_str (self)
 Returns the string representation of the model

class argo.models.V1alpha1WorkflowStep (*arguments=None*, *continue_on=None*,
name=None, *template=None*, *tem-*
plate_ref=None, *when=None*, *with_items=None*,

V1alpha1WorkflowStep - a model defined in OpenAPI

openapi_types

attribute_map

property arguments (self)
 Gets the arguments of this V1alpha1WorkflowStep. # noqa: E501

Returns The arguments of this V1alpha1WorkflowStep. # noqa: E501

Return type *V1alpha1Arguments*

property continue_on (self)
 Gets the continue_on of this V1alpha1WorkflowStep. # noqa: E501

Returns The continue_on of this V1alpha1WorkflowStep. # noqa: E501

Return type [V1alpha1ContinueOn](#)

property name (*self*)

Gets the name of this V1alpha1WorkflowStep. # noqa: E501

Name of the step # noqa: E501

Returns The name of this V1alpha1WorkflowStep. # noqa: E501

Return type str

property template (*self*)

Gets the template of this V1alpha1WorkflowStep. # noqa: E501

Template is the name of the template to execute as the step # noqa: E501

Returns The template of this V1alpha1WorkflowStep. # noqa: E501

Return type str

property template_ref (*self*)

Gets the template_ref of this V1alpha1WorkflowStep. # noqa: E501

Returns The template_ref of this V1alpha1WorkflowStep. # noqa: E501

Return type [V1alpha1TemplateRef](#)

property when (*self*)

Gets the when of this V1alpha1WorkflowStep. # noqa: E501

When is an expression in which the step should conditionally execute # noqa: E501

Returns The when of this V1alpha1WorkflowStep. # noqa: E501

Return type str

property with_items (*self*)

Gets the with_items of this V1alpha1WorkflowStep. # noqa: E501

WithItems expands a step into multiple parallel steps from the items in the list # noqa: E501

Returns The with_items of this V1alpha1WorkflowStep. # noqa: E501

Return type list[str]

property with_param (*self*)

Gets the with_param of this V1alpha1WorkflowStep. # noqa: E501

WithParam expands a step into multiple parallel steps from the value in the parameter, which is expected to be a JSON list. # noqa: E501

Returns The with_param of this V1alpha1WorkflowStep. # noqa: E501

Return type str

property with_sequence (*self*)

Gets the with_sequence of this V1alpha1WorkflowStep. # noqa: E501

Returns The with_sequence of this V1alpha1WorkflowStep. # noqa: E501

Return type [V1alpha1Sequence](#)

to_dict (*self*)

Returns the model properties as a dict

to_str(self)

Returns the string representation of the model

```
class argo.models.V1alpha1WorkflowTemplate (api_version=None, kind=None,  

                                             metadata=None, spec=None, lo-

1.1.2 Submodules

1.1.2.1 argo.configuration

Argo

No description provided (generated by Openapi Generator <https://github.com/openapitools/openapi-generator>) # noqa: E501

The version of the OpenAPI document: v2.4.3 Generated by: <https://openapi-generator.tech>

1.1.2.1.1 Module Contents

```
class argo.configuration.Configuration(host='http://localhost',           api_key=None,
                                         api_key_prefix=None,   username=None,   pass-
                                         word=None, signing_info=None)
```

Bases: `object`

NOTE: This class is auto generated by OpenAPI Generator

Ref: <https://openapi-generator.tech> Do not edit the class manually.

Parameters

- **host** – Base url
- **api_key** – Dict to store API key(s). Each entry in the dict specifies an API key. The dict key is the name of the security scheme in the OAS specification. The dict value is the API key secret.
- **api_key_prefix** – Dict to store API prefix (e.g. Bearer) The dict key is the name of the security scheme in the OAS specification. The dict value is an API key prefix when generating the auth data.
- **username** – Username for HTTP basic authentication
- **password** – Password for HTTP basic authentication
- **signing_info** – Configuration parameters for HTTP signature. Must be an instance of `argo.signing.HttpSigningConfiguration`

Example

Given the following security scheme in the OpenAPI specification:

components:

securitySchemes:

```
cookieAuth: # name for the security scheme type: apiKey in: cookie name: JSESSIONID #  
cookie name
```

You can programmatically set the cookie:

```
conf = argo.Configuration( api_key={'cookieAuth': 'abc123'} api_key_prefix={'cookieAuth': 'JSES-  
SIONID'}  
)
```

The following cookie will be added to the HTTP request: Cookie: JSESSIONID abc123

Configure API client with HTTP basic authentication:

```
conf = argo.Configuration( username='the-user', password='the-password',  
)
```

Configure API client with HTTP signature authentication. Use the ‘hs2019’ signature scheme, sign the HTTP requests with the RSA-SSA-PSS signature algorithm, and set the expiration time of the signature to 5 minutes after the signature has been created. Note you can use the constants defined in the argo.signing module, and you can also specify arbitrary HTTP headers to be included in the HTTP signature, except for the ‘Authorization’ header, which is used to carry the signature.

One may be tempted to sign all headers by default, but in practice it rarely works. This is because explicit proxies, transparent proxies, TLS termination endpoints or load balancers may add/modify/remove headers. Include the HTTP headers that you know are not going to be modified in transit.

```
conf = argo.Configuration(  
  
    signing_info = argo.signing.HttpSigningConfiguration( key_id = 'my-key-id', pri-  
    vate_key_path = 'rsa.pem', signing_scheme = signing.SCHEME_HS2019, sign-  
    ing_algorithm = signing.ALGORITHM_RSASSA_PSS, signed_headers = [sign-  
    ing.HEADER_REQUEST_TARGET,  
  
        signing.HEADER_CREATED, signing.HEADER_EXPIRES, sign-  
        ing.HEADER_HOST, signing.HEADER_DATE, signing.HEADER_DIGEST,  
        'Content-Type', 'Content-Length', 'User-Agent'  
  
    ],  
  
    signature_max_validity = datetime.timedelta(minutes=5)  
)  
)
```

Constructor

host

Default Base url

temp_folder_path

Temp file folder for downloading files

refresh_api_key_hook

function hook to refresh API key if expired

username

Username for HTTP basic authentication

```

password
    Password for HTTP basic authentication

signing_info
    The HTTP signing configuration

logger
    Logging Settings

logger_format = %(asctime)s %(levelname)s %(message)s
    Log format

logger_stream_handler
    Log stream handler

logger_file_handler
    Log file handler

logger_file
    Debug file location

debug = False
    Debug switch

verify_ssl = True
    SSL/TLS verification Set this to false to skip verifying SSL certificate when calling API from https server.

ssl_ca_cert
    Set this to customize the certificate file to verify the peer.

cert_file
    client certificate file

key_file
    client key file

assert_hostname
    Set this to True/False to enable/disable SSL hostname verification.

connection_pool_maxsize
    urllib3 connection pool's maximum number of connections saved per pool. urllib3 uses 1 connection as default value, but this is not the best value when you are making a lot of possibly parallel requests to the same host, which is often the case here. cpu_count * 5 is used as default value to increase performance.

proxy
    Proxy URL

proxy_headers
    Proxy headers

safe_chars_for_path_param =
    Safe chars for path_param

retries
    Adding retries to override urllib3 default value 3

property logger_file(self)
    The logger file.

    If the logger_file is None, then add stream handler and remove file handler. Otherwise, add file handler and remove stream handler.

Parameters value – The logger_file path.

```

Type str

property debug (self)
Debug status

Parameters value – The debug status, True or False.

Type bool

property logger_format (self)
The logger format.

The logger_formatter will be updated when sets logger_format.

Parameters value – The format string.

Type str

get_api_key_with_prefix (self, identifier)
Gets API key (with prefix if set).

Parameters identifier – The identifier of apiKey.

Returns The token for api key authentication.

get_basic_auth_token (self)
Gets HTTP basic authentication header (string).

Returns The token for basic HTTP authentication.

auth_settings (self)
Gets Auth Settings dict for api client.

Returns The Auth Settings information dict.

to_debug_report (self)
Gets the essential information for debugging.

Returns The report for debugging.

get_host_settings (self)
Gets an array of host settings

Returns An array of host settings

get_host_from_settings (self, index, variables=None)
Gets host URL based on the index and variables :param index: array index of the host settings :param variables: hash of variable and the corresponding value :return: URL based on host settings

ARGO-MODELS

argo-models is a argo namespaced package with the argo.models subpackage which contains the generated OpenAPI models from Argo.

Documentations can be found at <https://argo-models.readthedocs.io/en/latest/>

```
pip install argo-models
```

```
from argo.models import V1alpha1ArtifactLocation, V1alpha1S3Artifact
from kubernetes.client.models import V1SecretKeySelector

# create aws cred
access_key_secret = V1SecretKeySelector(name="s3_secret", key="accesskey")
secret_key_secret = V1SecretKeySelector(name="s3_secret", key="secretkey")

# create artifact config for s3
s3_artifact = V1alpha1S3Artifact(
    bucket="foobar",
    endpoint="s3.amazonaws.com"
    insecure=False,
    access_key_secret=access_key_secret,
    secret_key_secret=secret_key_secret,
    key=""
)

# create artifact location
artifact_location = V1alpha1ArtifactLocation(s3=s3_artifact)
```

2.1 Developer notes

To generate the latest models, update `version.txt` with the desired argo release (e.g. `2.3.0-rc3`) and then run `./generate-api.sh`.

To release new version to pypi, create a release with the corresponding version tag (e.g. `v2.2.1`). Travis will automatically publish the package.

NOTE:

`version.txt` should hold the current/latest argo version to be generated, as it is also used by `setup.py` as the `argo-models` package version.

Please install [@openapitools/openapi-generator-cli](#) to generate the openapi specs.

2.2 License

This package is licensed under [Apache-2.0](#) and is a derivative of the [Argo project](#) using OpenAPI generator.
